

Types of Cell Communication

Direct Contact

Cell Junctions: Gap junctions in animal cells and plasmodesmata in plant cells allow direct cytoplasmic connections between adjacent cells, facilitating the transfer of ions, molecules, and signaling substances.

Local Signaling

Paracrine Signaling: Signal molecules (local regulators) released by a cell affect nearby target cells. For example, growth factors stimulate cell proliferation.

Long-Distance Signaling

Endocrine Signaling: Hormones are released into the bloodstream and travel to distant target cells, where they elicit specific responses. For example, insulin regulates glucose metabolism.
