Consciousness And Self Regulation Advances In Research And Theory Volume 4:

Consciousness and Self-Regulation Richard J. Davidson, Gary E. Schwartz, David Shapiro, 2013-11-11 In the Preface to the third volume we described the evolution of this Series and the changes that have taken place in the field since the first volume appeared. The contents of the current volume continue the commitment to a broadly based perspective on research related to consciousness and self regulation which was embodied in the previous three volumes. Chapters are included which consider the role of consciousness in cognitive theory and clinical phenomena. Several of the contributions to this volume are concerned with the nature of self regulation and the role of conscious processing in the mediation of self regulated behavior. Most of the authors adopt a psychobiological approach to their subject matter. Our selection of contributors with a bias toward this approach reflects our own views that the psychobiological approach is a very fruitful one and that the architecture of the nervous system places important constraints on the types of theories that are possible in this emerging area. While the subject matter of the chapters in this volume is quite diverse, the contributions are united by their emphasis on the importance of consciousness and or self regulation in the understanding of behavior and experience. We have selected what we believe is representative of the best theory and research in the diverse areas which bear on the theme of this series, maintaining a balance between basic and clinical research.

Methods, Models, Simulations And Approaches Towards A General Theory Of Change - Proceedings Of The Fifth National Conference Of The Italian Systems Society Gianfranco Minati, Mario Abram, Eliano Pessa, 2012-03-27 The book contains the Proceedings of the 2010 Conference of the Italian Systems Society. Papers deal with the interdisciplinary study of processes of changing related to a wide variety of specific disciplinary aspects. Classical attempts to deal with them based on generalising approaches used to study the movement of bodies and environmental influence have included ineffective reductionistic simplifications. Indeed, changing also relates for instance to processes of acquisition and varying properties such as for software growing and aging biological systems, learning cognitive systems and socio economic systems growing and developing through innovations. Some approaches to modelling such processes are based on considering changes in structure e.g. phase transitions. Other approaches are based on considering 1) periodic changes in structure as for processes of self organisation, 2) non periodic but coherent changes in structure as for processes of emergence, 3) the quantum level of description. Papers in the book study the problem considering its transdisciplinary nature i.e. systemic properties studied per se and not within specific disciplinary contexts. The aim of these studies is to outline a transdisciplinary theory of change in systemic properties. Such a theory should have simultaneous corresponding and eventually hierarchical disciplinary aspects as expected for a general theory of emergence. Within this transdisciplinary context specific disciplinary research activities and results are assumed to be mutually represented as within a philosophical and conceptual framework based on the theoretical centrality of the observer and conceptual non

separability of context and observer related to logically open systems and Quantum Entanglement Contributions deal with such issues in interdisciplinary ways considering theoretical aspects and applications from Physics Cognitive Science Biology Artificial Intelligence Economics Architecture Philosophy Music and Social Systems

The Cambridge Handbook of Computational Psychology Ron Sun, 2008-04-28 This book is a definitive reference source for the growing increasingly more important and interdisciplinary field of computational cognitive modeling that is computational psychology It combines breadth of coverage with definitive statements by leading scientists in this field Research in computational cognitive modeling explores the essence of cognition and various cognitive functionalities through developing detailed process based understanding by specifying computational mechanisms structures and processes Given the complexity of the human mind and its manifestation in behavioral flexibility process based computational models may be necessary to explicate and elucidate the intricate details of the mind The key to understanding cognitive processes is often in fine details Computational models provide algorithmic specificity detailed exactly specified and carefully thought out steps arranged in precise yet flexible sequences These models provide both conceptual clarity and precision at the same time This book substantiates this approach through overviews and many examples

Automation and Systems Issues in Air Traffic Control John A. Wise, V. David Hopkin, Marvin L. Smith, 2012-12-06 In recent years increases in the amount and changes in the distribution of air traffic have been very dramatic and are continuing The need for changes in the current air traffic systems is equally clear While automation is generally accepted as a method of improving system safety and performance high levels of automation in complex human machine systems can have a negative effect on total system performance and have been identified as contributing factors in many accidents and failures Those responsible for designing the advanced air traffic control systems to be implemented throughout the alliance during the next decade need to be aware of recent progress concerning the most effective application of automation and artificial intelligence in human computer systems This volume gives the proceedings of the NATO Advanced Study Institute held in Maratea Italy June 18 29 1990 at which these issues were discussed

The Mind Possessed Emma Cohen, 2007-08-09 Illustrated mainly with hypothetical or anecdotal examples this book considers in detail how the psychological systems undergirding spirit concepts are activated in real world settings and specifically how those concepts can give rise to trance and spirit possession phenomena

Science of Memory Concepts Henry L. Roediger III, Yadin Dudai, Susan M.

Fitzpatrick, 2007-04-26 Scientists currently study memory from many different perspectives neurobiological ethological animal conditioning cognitive behavioral neuroscience social and cultural The aim of this book is to help initiate a new science of memory by bringing these perspectives together to create a unified understanding of the topic The book began with a conference where leading practitioners from all these major approaches met to analyze and discuss 16 concepts that are crucial to our understanding of memory Each of these 16 concepts is addressed in a section of the book and in the 66 succinct chapters that fill these sections a leading researcher addresses the section s concept by clearly stating his or her position on it elucidating how it is used and discussing how it should be used in future research For some concepts there is general agreement among practitioners from different fields and levels of analysis but for others there is general disagreement and much controversy A final chapter in each section also written by a leading researcher integrates the

various viewpoints offered on the section's concept then draws conclusions about the concept. This groundbreaking volume will be an indispensable reference for all the students and researchers who will build upon the foundation it provides for the new science of memory.

Meditation Deane H. Shapiro Jnr., Roger N. Walsh, 2017-07-12. Many claim that meditation is effective in the treatment of many ailments associated with stress and high blood pressure and in the management of pain. While there are many popular books on meditation few embrace the science as well as the art of meditation. In this volume Shapiro and Walsh fill this need by assembling a complete collection of scholarly articles. *Meditation: Classic and Contemporary Perspectives*. From an academic rather than a popular vantage the volume takes the claims and counterclaims about meditation to a deeper analytical level by including studies from clinical psychology and psychiatry neuroscience psychophysiology and biochemistry. Each selection is a contribution to the field either as a classic of research or by being methodologically elegant heuristically interesting or creative. Original articles cover such topics as the effects of meditation in the treatment of stress hypertension and addictions the comparison of meditation with other self-regulation strategies the adverse effects of meditation and meditation induced altered states of consciousness. Concluding with a major bibliography of related works *Meditation* offers the reader a valuable overview of the state and possible future directions of meditation research. Today in the popular media and elsewhere debate continues: Is meditation an effective technique for spiritual and physical healing or is it quackery? *Meditation: Classic and Contemporary Perspectives* weighs in on this debate by presenting what continues to be the most complete collection of scholarly articles ever amassed on the subject of meditation.
