Errors and Biases in Modern Healthcare: Public Health, Medico-legal and Risk Management Aspects Simone Grassi, Davide Ferorelli, Francesco De Micco, Francesco Ausania, 2025-09-30 Preventing errors and governing their consequences is one of the most important challenges in modern healthcare. The field of healthcare is currently grappling with the complexities of errors and biases that arise from both human and technological sources. The trade off between organizational targeted and human targeted interventions to prevent these errors is complicated by the role that may be played by individual e.g. cognitive failures and by the evidence that error in medicine is often not a random event tending to recur in some professionals. Recent studies have highlighted the non random nature of medical errors suggesting that certain professionals may be more prone to recurring mistakes. Moreover, the integration of artificial intelligence in healthcare introduces new challenges such as communication of risks and patient engagement and new kinds of errors/biases that have different causes and thus require different solutions. Despite ongoing efforts to address these issues, there remains a significant gap in understanding the root causes of these errors and biases as well as the effectiveness of various interventions.
