Scientific Computing with MATLAB and Octave Alfio Quarteroni, Fausto Saleri, 2007-06-21 Preface to the First Edition This textbook is an introduction to Scientific Computing We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil We will show how to compute the zeros or the integrals of continuous functions solve linear systems approximate functions by polynomials and construct accurate approximations for the solution of differential equations With this aim in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers vectors and matrices In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion We will gradually discover its principal commands statements and constructs We will show how to execute all the algorithms that we introduce throughout the book This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability accuracy and complexity We will solve several problems that will be raised through exercises and examples often stemming from scientific applications American Book Publishing Record ,2003 Whitaker's Books in Print ,1998 *Computational Engineering of Historical Memories* Andrea Nanetti, 2022-09-26 Nanetti outlines a methodology for deploying artificial intelligence and machine learning to enhance historical research Historical events are the treasure of human experiences the heritage that societies have used to remain resilient and express their identities Nanetti has created and developed an interdisciplinary methodology supported by practice based research that serves as a pathway between historical and computer sciences to design and build computational structures that analyse how societies create narratives about historical events This consilience pathway aims to make historical memory machine understandable It turns history into a computational discipline through an interdisciplinary blend of philological accuracy historical scholarship history based media projects and computational tools Nanetti presents the theory behind this methodology from a humanities perspective and discusses its practical application in user interface and experience An essential read for historians and scholars working in the digital humanities Cálculo Científico con MATLAB y Octave A. Quarteroni, F. Saleri, 2007-03-06 Este libro de texto es una introducción al Cálculo Científico que ilustra varios métodos numéricos para la solución con computador de ciertas clases de problemas matemáticos Los autores muestran cómo calcular los ceros o las integrales de funciones continuas resolver sistemas lineales aproximar funciones por polinomios y construir aproximaciones precisas para la solución de ecuaciones diferenciales Para hacer la presentación concreta y atractiva se ha adoptado el entorno de programación MATLAB como un fiel compañero Se muestran todos los algoritmos introducidos a través del libro suministrando de este modo una evaluación cuantitativa inmediata de sus propiedades técnicas como son la estabilidad la precisión y la complejidad El libro también contiene la solución de varios problemas planteados a través de ejercicios y ejemplos a menudo surgidos de aplicaciones específicas Se dedica una sección específica a temas que no fueron tratados en el libro y se indican algunas

CÁLCULO CIENTÍFICO com MATLAB e Octave A. Quarteroni, F. Saleri, 2007-12-10 Este livro introduz o Cálculo Científico. O seu objectivo consiste em apresentar vários métodos numéricos para resolver no computador certos problemas matemáticos que não podem ser tratados de maneira mais simples. São abordadas questões clássicas como o cálculo de zeros ou de integrais de funções contínuas a resolução de sistemas lineares a aproximação de funções por polinómios e a construção de aproximações precisas de soluções de equações diferenciais. Todos os algoritmos são apresentados nas linguagens de programa MATLAB e Octave cujos comandos e instruções principais se introduzem de forma gradual visando em particular a sua compatibilidade nas duas linguagens. O leitor pode assim verificar experimentalmente propriedades típicas como a estabilidade a precisão e a complexidade. O livro inclui ainda a resolução de problemas através de numerosos exercícios e exemplos frequentemente ligados a aplicações concretas. No fim de cada capítulo encontra-se uma secção específica que apresenta assuntos não abordados e as referências bibliográficas que permitem ao leitor aprofundar os conhecimentos adquiridos.

Calcul Scientifique Alfio Maria Quarteroni, Fausto Saleri, 2006-09-21 Ce livre constitue une introduction au Calcul Scientifique. Son objectif est de présenter des méthodes numériques permettant de résoudre avec un ordinateur certains problèmes mathématiques qui ne peuvent être traités simplement avec un papier et un crayon. La présentation de ces méthodes est rendue vivante par le recours systématique Matlab et Octave dont les principales commandes sont introduites progressivement.

Geospatial Analysis and Modelling of Urban Structure and Dynamics Bin Jiang, Xiaobai Yao, 2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century. Forty years ago when spatial analysis first emerged as a distinct theme within geography's quantitative revolution the focus was largely on consistent methods for measuring spatial correlation. The concept of spatial autocorrelation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics. Early applications of spatial correlation tended to reflect geographical patterns expressed as points. The perspective taken on such analytical thinking was founded on induction: the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested. In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation. Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest. In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied.
