C Compilers For Asips C Compilers For Asips:

C Compilers for ASIPs Manuel Hohenauer, Rainer Leupers, 2009-10-13 This book presents a novel approach for Architecture Description Language ADL based instruction set description that enables the automatic retargeting of the complete software toolkit from a single ADL processor model **Optimized ASIP Synthesis from Architecture Description Language Models** Oliver Schliebusch, Heinrich Meyr, Rainer Leupers, 2007-04-27 New software tools and a sophisticated methodology above RTL are required to answer the challenges of designing an optimized application specific processor ASIP This book offers an automated and fully integrated implementation flow and compares it to common implementation practice Case studies emphasise that neither the architectural advantages nor the design space of ASIPs are sacrificed for an automated implementation Realizing a building block which fulfils the requirements on programmability and computational power is now efficiently possible for the first time Optimized ASIP Synthesis from Architecture Description Language Models inspires hardware designers as well as application engineers to design powerful ASIPs that will make their SoC designs unique **Computer Systems: Architectures, Modeling, and Simulation** Andy Pimentel, Stamatis Vassiliadis, 2004-07-05 This book constitutes the refereed proceedings of the 4th International Workshop on Systems Architectures Modeling and Simulation SAMOS 2004 held in Samos Greece on July 2004 Besides the SAMOS 2004 proceedings the book also presents 19 revised papers from the predecessor workshop SAMOS 2003 The 55 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections on reconfigurable computing architectures and implementation and systems modeling and simulation *Application Analysis Tools for ASIP Design* Kingshuk Karuri, Rainer Leupers, 2011-06-15 This book introduces a novel design methodology which can significantly reduce the ASIP development effort through high degrees of design automation The key elements of this new design methodology are a powerful application profiler and an automated instruction set customization tool which considerably lighten the burden of mapping a target application to an ASIP architecture in the initial design stages The book includes several design case studies with real life embedded applications to demonstrate how the methodology and the tools can be used in practice for accelerating the overall ASIP design process Hardware/Software Co-Design Giovanni DeMicheli, M.G. Sami, 2013-11-11 Concurrent design or co design of hardware and software is extremely important for meeting design goals such as high performance that are the key to commercial competitiveness Hardware Software Co Design covers many aspects of the subject including methods and examples for designing 1 general purpose and embedded computing systems based on instruction set processors 2 telecommunication systems using general purpose digital signal processors as well as application specific instruction set processors 3 embedded control systems and applications to automotive electronics The book also surveys the areas of emulation and prototyping systems with field programmable gate array technologies hardware software synthesis and verification and industrial design trends Most contributions emphasize

the design methodology the requirements and state of the art of computer aided co design tools together with current design examples

Retargetable Compiler Technology for Embedded Systems Rainer Leupers, Peter Marwedel, 2013-03-09 It is well known that embedded systems have to be implemented efficiently This requires that processors optimized for certain application domains are used in embedded systems Such an optimization requires a careful exploration of the design space including a detailed study of cost performance tradeoffs In order to avoid time consuming assembly language programming during design space exploration compilers are needed In order to analyze the effect of various software or hardware configurations on the performance retargetable compilers are needed that can generate code for numerous different potential hardware configurations This book provides a comprehensive and up to date overview of the fast developing area of retargetable compilers for embedded systems It describes a large set important tools as well as applications of retargetable compilers at different levels in the design flow Retargetable Compiler Technology for Embedded Systems is mostly self contained and requires only fundamental knowledge in software and compiler design It is intended to be a key reference for researchers and designers working on software compilers and processor optimization for embedded systems

Embedded Software Alberto Sangiovanni-Vincentelli, Joseph Sifakis, 2002-09-25 This book constitutes the refereed proceedings of the Second International Conference on Embedded Software EMSOFT 2002 held in Grenoble France in October 2002 The book presents 13 invited papers by leading researchers and 17 revised full papers selected during a competitive round of reviewing The book spans the whole range of embedded software including operating systems and middleware programming languages and compilers modeling and validation software engineering and programming methodologies scheduling and execution time analysis formal methods and communication protocols and fault tolerance

Building ASIPs: The Mescal Methodology Matthias Gries, Kurt Keutzer, 2006-07-01 An increasing number of system designers are using ASIP s rather than ASIC s to implement their system solutions Building ASIPs The Mescal Methodology gives a simple but comprehensive methodology for the design of these application specific instruction processors ASIPs The key elements of this methodology are judiciously using benchmarking inclusively identifying the architectural space efficiently describing and evaluating the ASIPs comprehensively exploring the design space successfully deploying the ASIP This book includes demonstrations of applications of the methodologies using the Tipi research framework as well as state of the art commercial toolsets from CoWare and Tensilica

Software and Compilers for Embedded Systems Henk Schepers, 2004-10-29 This volume contains the proceedings of the 8th International Workshop on Software and Compilers for Embedded Systems SCOPES 2004 held in Amsterdam The Netherlands on September 2 and 3 2004 Initially the workshop was referred to as the International Workshop on Code Generation for Embedded Systems The first took place in 1994 in Schloss Dagstuhl Germany From its beginnings the intention of the organizers has been to create an interactive atmosphere in which the participants can discuss and profit from the assembly of international experts in the field The name SCOPES has been used since the fourth edition in Stuttgart

Goar G many in 1999 when the scope of the workshop was extended to also cover general issues in embedded software design Since then SCOPES has been held again in St Goar in 2001 Berlin Germany in 2002 Vienna Austria in 2003 and now in Amsterdam The Netherlands In response to the call for papers almost 50 very strong papers were submitted from all over the world All submitted papers were reviewed by at least three experts to ensure the quality of the workshop In the end the program committee selected 17 papers for presentation at the workshop These papers are divided into the following categories application specific co design system and application synthesis data flow analysis data partitioning task scheduling and code generation In addition to the selected contributions the keynote address was delivered by Mike Uhler from MIPS Technologies An abstract of his talk is also included in this volume [A Practical Introduction to Hardware/Software Codesign](#) Patrick R. Schaumont, 2012-11-27 This textbook serves as an introduction to the subject of embedded systems design with emphasis on integration of custom hardware components with software The key problem addressed in the book is the following how can an embedded systems designer strike a balance between flexibility and efficiency The book describes how combining hardware design with software design leads to a solution to this important computer engineering problem The book covers four topics in hardware software codesign fundamentals the design space of custom architectures the hardware software interface and application examples The book comes with an associated design environment that helps the reader to perform experiments in hardware software codesign Each chapter also includes exercises and further reading suggestions Improvements in this second edition include labs and examples using modern FPGA environments from Xilinx and Altera which will make the material in this book applicable to a greater number of courses where these tools are already in use More examples and exercises have been added throughout the book If I were teaching a course on this subject I would use this as a resource and text If I were a student who wanted to learn codesign I would look for a course that at least used a similar approach If I were an engineer or engineering manager who wanted to learn more about codesign from a very practical perspective I would read this book first before any other When I first started learning about codesign as a practitioner a book like this would have been the perfect introduction Grant Martin Tensilica
