By Bas C Van Fraassen Scientific Representation Paradoxes Of Perspective:

Scientific Representation James Nguyen, Roman Frigg, 2022-09-01 This Element presents a philosophical exploration of the notion of scientific representation. It does so by focussing on an important class of scientific representations namely scientific models. Models are important in the scientific process because scientists can study a model to discover features of reality. But what does it mean for something to represent something else? This is the question discussed in this Element. The authors begin by disentangling different aspects of the problem of representation and then discuss the dominant accounts in the philosophical literature: the resemblance view and inferentialism. They find them both wanting and submit that their own preferred option, the so-called DEKI account, not only eschews the problems that beset these conceptions but further provides a comprehensive answer to the question of how scientific representation works. This title is also available as Open Access on Cambridge Core.

Bas van Fraassen's Approach to Representation and Models in Science Wenceslao J. Gonzalez, 2014-02-19 This book analyzes Bas van Fraassen's characterization of representation and models in science. In this regard, it presents the philosophical coordinates of his approach and pays attention to his structural empiricism as a framework for his views on scientific representations and models. These are developed here through two new contributions made by van Fraassen. In addition, there are analyses of the relation between models and reality in his approach where the complexity of this conception is considered in detail. Furthermore, there is an examination of scientific explanation and epistemic values judgments. This volume includes a wealth of bibliographical information on his philosophy and relevant philosophical issues. Bas van Fraassen is a key figure in contemporary philosophy of science as the prestigious Hempel Award shows. His views on scientific representation offer new ideas on how it should be characterized and his conception of models shows a novelty that goes beyond other empiricists' approaches of recent times. Both aspects, the characterization of scientific representation and the conception of models in science, are part of a deliberate attempt to forge a structural empiricism, an alternative to structural realism based on an elaborated version of empiricism.

Scientific Theories and Philosophical Stances Claus Beisbart, Michael Frauchiger, 2024-05-20 Since the publication of his seminal monograph *The Scientific Image*, Bas van Fraassen is a key figure in philosophy of science. In this book, other philosophers with various outlooks critically discuss his work on theories, empiricism, and philosophical stances. The book starts with a new article by van Fraassen on his preferred account of theories, the so-called semantic view. This account is now 50 years old, and van Fraassen takes this anniversary as an opportunity to review the account, its history, and the philosophical discussion about it. In the main part of the book, Nancy Cartwright, Finnur Dellsén, Matthias Egg, Steven French, Michael Friedman, Milena Ivanova, and Michela Massimi discuss van Fraassen's contributions to philosophy. Three chapters focus on his engagement with realism: French, Friedman, and Ivanova. Others study his voluntarism: Cartwright and his view on representation: Massimi. Finally, there are contributions about his elaboration of empiricism: Dellsén and his proposal to consider philosophical positions as stances: Egg.

The volume includes a laudatio written by Steven French and finishes with a reply by van Fraassen to his critics **The New Mechanical Philosophy** Stuart Glennan, 2017-07-26 The New Mechanical Philosophy argues for a new image of nature and of science one that understands both natural and social phenomena to be the product of mechanisms and that casts the work of science as an effort to discover and understand those mechanisms Drawing on an expanding literature on mechanisms in physical life and social sciences Stuart Glennan offers an account of the nature of mechanisms and of the models used to represent them A key quality of mechanisms is that they are particulars located at different places and times with no one just like another The crux of the scientist's challenge is to balance the complexity and particularity of mechanisms with our need for representations of them that are abstract and general This volume weaves together metaphysical and methodological questions about mechanisms Metaphysically it explores the implications of the mechanistic framework for our understanding of classical philosophical questions about the nature of objects properties processes events causal relations natural kinds and laws of nature Methodologically the book explores how scientists build models to represent and understand phenomena and the mechanisms responsible for them Using this account of representation Glennan offers a scheme for characterizing the enormous diversity of things that scientists call mechanisms and explores the scope and limits of mechanistic explanation **The Puzzle of Vehicle Selection in Conceptual Metonymies** Hubert

Kowalewski, 2023-12-14 When you use a metonymy to say I've got a new set of wheels why do you refer to a car by means of the wheels rather than any other part Most cognitive linguists would agree that we prefer to talk about parts that are somehow salient yet the seemingly simple notion of salience is entangled in a number of intricate problems related to how we understand and talk about the surrounding reality Adopting the theoretic framework of Ronald Langacker's Cognitive Grammar this volume studies deep and general cognitive factors governing salience effects that influence the ways we use conceptual metonymies in phonic and sign languages Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

Representing Space in the Scientific Revolution David Marshall Miller, 2014-08-07 Using an integrated philosophical and historical approach this book explores the fundamental shift in understandings of space in the scientific revolution

Eppur si muove: Doing History and Philosophy of Science with Peter Machamer Marcus P. Adams, Zvi Biener, Uljana Feest, Jacqueline A. Sullivan, 2017-03-23 This volume is a collection of original essays focusing on a wide range of topics in the History and Philosophy of Science It is a festschrift for Peter Machamer which includes contributions from scholars who at one time or another were his students The essays bring together analyses of issues and debates spanning from early modern science and philosophy through the 21st century Machamer's influence is reflected in the volume's broad range of topics These include underdetermination scientific practice scientific models mechanistic explanation in contemporary and historical science values in science the relationship between philosophy and psychology experimentation supervenience and reductionism

Conscious Experience Anil Gupta, 2019-02-11 A distinguished philosopher offers a novel account of experience and reason and develops our understanding of conscious experience and its relationship to thought a new reformed empiricism The role of experience in cognition is a central and ancient philosophical concern How theorists ask can our private experiences guide us to knowledge of a mind independent reality Exploring topics in logic philosophy of mind and epistemology Conscious Experience proposes a new answer to this age old question explaining how conscious experience contributes to the rationality and content of empirical beliefs According to Anil Gupta this contribution cannot be determined independently of an agent's conceptual scheme and prior beliefs but that doesn't mean it is entirely mind dependent While the rational contribution of an experience is not propositional it does not for example provide direct knowledge of the world it does authorize certain transitions from prior views to new views In short the rational contribution of an experience yields a rule for revising views Gupta shows that this account provides theoretical freedom it allows the observer to radically reconceive the world in light of empirical findings Simultaneously it grants empirical reason significant power to constrain forcing particular conceptions of self and world on the rational inquirer These seemingly contrary virtues are reconciled through novel treatments of presentation appearances and ostensive definitions Collectively Gupta's arguments support an original theory reformed empiricism He abandons the idea that experience is a source of knowledge and justification He also abandons the idea that concepts are derived from experience But reformed empiricism preserves empiricism's central insight experience is the supreme epistemic authority In the resolution of factual disagreements experience trumps all

Thinking about Science, Reflecting on Art Otávio Bueno, George Darby, Steven French, Dean Rickles, 2017-08-07 Thinking about Science Reflecting on Art Bringing Aesthetics and Philosophy of Science Together is the first book to systematically examine the relationship between the philosophy of science and aesthetics With contributions from leading figures from both fields this edited collection engages with such questions as Does representation function in the same way in science and in art What important characteristics do scientific models share with literary fictions What is the difference between interpretation

in the sciences and in the arts Can there be a science of aesthetics In what ways can aesthetics and philosophy of science be integrated Aiming to develop the interconnections between the philosophy of science and the philosophy of art more broadly and more deeply than ever before this volume not only explores scientific representation by comparison with fiction but extends the scope of interaction to include metaphysical and other questions around methodology in mainstream philosophy of science including the aims of science the characterisation of scientific understanding and the nature of observation as well as drawing detailed comparisons between specific examples in both art and the sciences
