Critical Political Ecology The Politics Of Environmental Science:

Critical Political Ecology Tim Forsyth, 2003 Describes new ways of looking at environmental science and politics and discusses the problems of formulating and implementing environmental policy particularly in the global arena and in developing countries

Critical Political Ecology Timothy Forsyth, 2004-11-23 Critical Political Ecology brings political debate to the science of ecology As political controversies multiply over the science underlying environmental debates there is an increasing need to understand the relationship between environmental science and politics In this timely and wide ranging volume Tim Forsyth uses an innovative approach to apply political analysis to ecology and demonstrates how more politicised approaches to science can be used in environmental decision making Critical Political Ecology examines how social and political factors frame environmental science and how science in turn shapes politics how new thinking in philosophy and sociology of science can provide fresh insights into the biophysical causes and impacts of environmental problems how policy and decision makers can acknowledge the political influences on science and achieve more effective public participation and governance

Critical Landscape Planning during the Belt and Road Initiative Ashley Scott Kelly, Xiaoxuan Lu, 2021-09-29 This open access book traces the development of landscapes along the 414 kilometer China Laos Railway one of the first infrastructure projects implemented under China's Belt and Road Initiative BRI and which is due for completion at the end of 2021 Written from the perspective of landscape architecture and intended for planners and related professionals engaged in the development and conservation of these landscapes this book provides history planning pedagogy and interdisciplinary framing for working alongside the often opaque planning design and implementation processes of large scale infrastructure It complicates simplistic notions of development and urbanization frequently reproduced in the Laos China frontier region Many of the projects and sites investigated in this book are recent firsts in Laos Laos's first wildlife sanctuary for trafficked endangered species its first botanical garden and its first planting plan for a community forest Most often the agents and accomplices of neoliberal development the planning and design professions including landscape architecture have little dialogue with either the mainstream natural sciences or critical social sciences that form the discourse of projects in Laos and comparable contexts Covering diverse conceptions and issues of development including cultural and scientific knowledge exchanges between Laos and China nature tourism connectivity and new town planning this book also features nine planning proposals for Laos generated through this research initiative since the railway's groundbreaking in 2016 Each proposal promotes a wider landscape approach to development and deploys landscape architecture's spatial and ecological acumen to synthesize critical development studies with the planner's capacity if not naive predilection to intervene on the ground Ultimately this book advocates the cautious engagement of the professionally oriented built environment disciplines such as regional planning civil engineering and landscape architecture with the landscapes of development institutions and environmental NGOs

Mexican Americans and the Environment Devon G. Peña,2022-09-13 Mexican Americans have traditionally had a strong land ethic believing that humans must respect la tierra because it is the source of la vida As modern market forces exploit the earth communities struggle to control their own ecological futures and several studies have recorded that Mexican Americans are more impacted by environmental injustices than are other national origin groups In our countryside agricultural workers are poisoned by pesticides while farmers have lost ancestral lands to expropriation And in our polluted inner cities toxic wastes sicken children in their very playgrounds and homes This book addresses the struggle for environmental justice grassroots democracy and a sustainable society from a variety of Mexican American perspectives It draws on the ideas and experiences of people from all walks of life activists farmworkers union organizers land managers educators and many others who provide a clear overview of the most critical ecological issues facing Mexican origin people today The text is organized to first provide a general introduction to ecology from both scientific and political perspectives It then presents an environmental history for Mexican origin people on both sides of the border showing that the ecologically sustainable Norte o land use practices were eroded by the conquest of El Norte by the United States It finally offers a critique of the principal schools of American environmentalism and introduces the organizations and struggles of Mexican Americans in contemporary ecological politics Devon Pe a contrasts tenets of radical environmentalism with the ecological beliefs and grassroots struggles of Mexican origin people then shows how contemporary environmental justice struggles in Mexican American communities have challenged dominant concepts of environmentalism Mexican Americans and the Environment is a didactically sound text that introduces students to the conceptual vocabularies of ecology culture history and politics as it tells how competing ideas about nature have helped shape land use and environmental policies By demonstrating that any consideration of environmental ethics is incomplete without taking into account the experiences of Mexican Americans it clearly shows students that ecology is more than nature study but embraces social issues of critical importance to their own lives
