

Hot Tub Troubleshooting

Priming the Pump – aka Air Lock

Every so often after a spa is drained and refilled you may experience what is called an "air lock". You will hear the pump running but there will be no activity from the jets operated by this pump. This is a sign that the pump is not properly primed.

To correct this situation, please perform the following:

1. Turn off the power to the spa.
2. Remove the cabinet panel in front of the equipment.
3. Turn the power back on to locate the correct pump that needs attention. Typically you hear it running, but see no water moving out of the jets.
4. Turn the power back off.
5. Locate the drain plug on the front of the correct pump and loosen it to allow the air to escape. **DO NOT TAKE COMPLETELY OUT, SIMPLY LOOSEN IT!** You may hear some air releasing, or a small amount of water may escape. Hand tighten the plug.
 - a. *** If you have pliers large enough, you may also loosen the 1.5" or 2" union on the end of the pump to release the air lock.
6. Turn the power back on and activate the pump to be sure that the jets are working at full speed and then tighten the plug to insure that it will not leak. Loosening and tightening the plug may require small pliers. **DO NOT OVER TIGHTEN. PLUGS WILL BREAK OFF.**
7. Reinstall the cabinet panel.

Caldera Hot Tub Repair Manual
