

Remember...

To achieve a safe shot on an animal that is running or moving, always aim from the front. Never fire an empty live animal or running animal, and fire a better shot.

Vital Shots

Every hunter wants to bring home the game he or she is seeking, and sometimes every animal is difficult to achieve a minimal amount of suffering. To achieve these goals, it is essential that you understand the anatomy of the game you're shot and learn how to place a shot for a clean kill.

Where To Shoot

- The most effective shot on a running animal is a vital shot. In large game animals, these organs lie in the chest cavity behind the front shoulder. A lung shot is the most effective shot for big game.
- The area of the vital organs also contains major blood vessels and arteries. A shot in this area causes considerable bleeding. If the animal drops the immediately will stop to die, it will have a blood trail that's easy to track.
- Aside from being a good technique, the key to a clean kill is patience. Hunters should limit shots to the vital organs only. If you do not have a clean shot to the vital organs, wait until the animal presents the best possible shot.

The most effective location for a turkey shot is the head and neck. The greatest shot angle for turkeys is frontally, aiming for the head or neck.

Choosing the Proper Shot Angle

The shot angle is the angle at which the animal is standing in relation to the hunter. Knowing which angles offer the most effective—and least effective—shots is an essential part of being a responsible hunter.

Broadside

The broadside shot angle is the preferred shot angle for both hunters and their animals for larger game animals, such as elk, deer, and bear.

- **Elk:** The broadside position offers several excellent shots for a hunter. The best target is the shoulder and chest area. A bullet of the correct weight that is fired from a distance adequate for the game will break the shoulder bone and sever the lungs or heart.
- **Deer:** The broadside angle offers the best shot for the largest big game animals, such as elk, deer, and bear. For most big game, the shooting spot is straight up from the back side of the front leg, one-third of the way up from the bottom of the chest. The arrow will penetrate the rib but not the shoulder bone, so you must fire one leg in frontward, and one behind the shoulder.
- **Quarrying Away:** The quarrying away shot angle is when your target is facing away from you but at an angle. The animal is usually looking away from you.
 - **Elk:** For hunters hunting, the quarrying away position offers several shooting spots on all big game. The area just behind the shoulder is the best shooting spot for those presentations of the vital organs. Focus on hitting the chest area above the opposite front leg.

The preferred shot for larger game animals, such as elk, deer and bear is broadside.

Firing Positions

There are four standard rifle firing positions: prone, standing, sitting, and kneeling.

Prone

The prone position is the most stable of the four positions. Because it's the easiest to hold, it's the best position for maximizing the effectiveness of long-range, heavily armed, rugged weapons and follow through.

Safety Tip

Shooting a firearm can cause explosion and permanent hearing loss and eye damage over time.

- When shooting any firearm, always wear properly fitting eye protection for target practice, use an earplug or earmuff or both, with a high Noise Reduction Rating (NRR).

When hunting, ear protection is not worn because that allows hearing to come unimpaired hearing, but there is always a risk of sound. The American National Rifle Association (ANRA) and the National Hearing Conservation Association (NHCA) are the best sources of information on hearing protection.

- Also wear suitable eye protection, such as shooting glasses with high impact lenses, when shooting to protect your vision.

Standing

With neither arm supported, this is the most difficult position for firing an accurate shot. Rather than trying to hold the barrel steady, which is impossible, try to keep movement of the barrel to a small area as possible. Bumps, raised surfaces will produce the best shot.

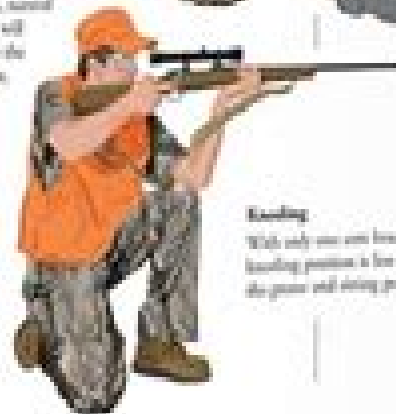

Sitting

Both arms are supported by your legs. More so the prone position, this is the most stable position.

Kneeling

With only one arm braced, the kneeling position is less steady than the prone and sitting positions.
