Argyle, 2018-10-01 This book is a printed edition of the Special Issue Advances in Catalyst Deactivation that was published in Catalysts *Hydrocarbon Chemistry, 2 Volume Set* George A. Olah, Arpad Molnar, G. K. Surya Prakash, 2017-10-02 This book provides an unparalleled contemporary assessment of hydrocarbon chemistry presenting basic concepts current research and future applications Comprehensive and updated review and discussion of the field of hydrocarbon chemistry Includes literature coverage since the publication of the previous edition Expands or adds coverage of carboxylation sustainable hydrocarbons extraterrestrial hydrocarbons Addresses a topic of special relevance in contemporary science since hydrocarbons play a role as a possible replacement for coal petroleum oil and natural gas as well as their environmentally safe use Reviews of prior edition literature coverage is comprehensive and ideal for quickly reviewing specific topics of most value to industrial chemists Angewandte Chemie and useful for chemical engineers as well as engineers in the chemical and petrochemical industries Petroleum Science and Technology *Catalyst Deactivation 2001* J.J. Spivey, G.W. Roberts, B.H. Davis, 2001-09-21 This proceedings contains the papers presented at the 9th International Symposium on Catalyst Deactivation held in Lexington KY USA on 7-10 October 2001 *Hydrocarbon Chemistry* George A. Olah, Árpád Molnár, 2003-09-10 Hydrocarbons and their transformations play major roles in chemistry as raw materials and sources of energy Diminishing petroleum supplies regulatory problems and environmental concerns constantly challenge chemists to rethink and redesign the industrial applications of hydrocarbons Written by Nobel Prize winner George Olah and hydrocarbon expert Árpád Molnár the completely revised and expanded Second Edition of Hydrocarbon Chemistry provides an unparalleled contemporary assessment of the field presenting basic concepts current research and future applications Hydrocarbon Chemistry begins by discussing the general aspects of hydrocarbons the separation of hydrocarbons from natural sources and the synthesis from C1 precursors with recent developments for possible future applications Each successive chapter deals with a specific type of hydrocarbon transformation The Second Edition includes a new section on the chemical reduction of carbon dioxide focusing on catalytic ionic electrocatalytic photocatalytic and enzymatic reductions as well as a new chapter on new catalysts and activation methods combinatorial chemistry and environmental chemistry Other topics covered include Major processes of the petrochemical industry such as cracking reforming isomerization and alkylation Derivation reactions to form carbon heteroatom bonds Hydrocarbon oxidations Metathesis Oligomerization and polymerization of hydrocarbons All chapters have been updated by adding sections on recent developments to review new advances and results Essential reading for practicing scientists in industry polymer and catalytic chemists as well as researchers and graduate students Hydrocarbon Chemistry Second Edition remains the benchmark text in its field *Kirk-Othmer Encyclopedia of Chemical Technology, Volume 5* Kirk-Othmer, 2004 The fifth edition of the Kirk Othmer Encyclopedia of Chemical Technology builds upon the solid foundation of the previous editions

which have proven to be a mainstay for chemists biochemists and engineers at academic industrial and government institutions since publication of the first edition in 1949 The new edition includes necessary adjustments and modernisation of the content to reflect changes and developments in chemical technology Presenting a wide scope of articles on chemical substances properties manufacturing and uses on industrial processes unit operations in chemical engineering and on fundamentals and scientific subjects related to the field The Encyclopedia describes established technology along with cutting edge topics of interest in the wide field of chemical technology whilst uniquely providing the necessary perspective and insight into pertinent aspects rather than merely presenting information Set begins publication in March 2004 Over 1000 articles in 27 volumes More than 600 new or updated articles Reviews from the previous edition The most indispensable reference in the English language on all aspects of chemical technology the best reference of its kind Chemical Engineering News 1992 Overall ECT is well written and cleanly edited and no library claiming to be a useful resource for chemical engineering professionals should be without it Nicholas Basta Chemical Engineering December 1992

Alkene Polymerization Reactions with Transition Metal Catalysts Yury Kissin, 2008-03-10 During the past 30 years the field of alkene polymerization over transition metal catalysts underwent several major changes 1 The list of commercial heterogeneous Ziegler Natta catalysts for the synthesis of polyethylene and stereoregular polyolefins was completely renewed affording an unprecedented degree of control over the polymer structure 2 Research devoted to metallocene and other soluble transition metal catalysis has vastly expanded and has shifted toward complexes of transition metals with multidentate ligands 3 Recent developments in gel permeation chromatography temperature rising fractionation and crystallization fractionation provided the first reliable information about differences between various active centers in transition metal catalysts 4 A rapid development of high resolution ^{13}C NMR spectroscopy resulted in greatly expanded understanding of the chemical and steric features of polyolefins and alkene copolymers These developments require a new review of all aspects of alkene polymerization reactions with transition metal catalysts The first chapter in the book is an introductory text for researchers who are entering the field It describes the basic principles of polymerization reactions with transition metal catalysts the types of catalysts and commercially manufactured polyolefins The next chapter addresses the principal issue of alkene polymerization catalysis the existence of catalyst systems with single and multiple types of active centers The subsequent chapters are devoted to chemistry and stereochemistry of elemental reaction steps structures of catalyst precursors and reactions leading to the formation of active centers kinetics of polymerization reactions and their mechanisms The book describes the latest commercial polymerization catalysts for the synthesis of polyethylenes and polypropylene The book provides a detailed description of the multi center nature of commercial Ziegler Natta catalysts The book devotes specialized chapters to the most important aspects of transition metal polymerization catalysts the reactions leading to the formation of active centers the chemistry and stereochemistry of elemental polymerization steps reaction kinetics and the polymerization

mechanism The book contains an introductory chapter for researchers who are entering the field of polymerization catalysis It describes the basic principles of polymerization reactions with transition metal catalysts and the types of commercially manufactured polyolefins and copolymers The book contains over 2000 references the most recent up to end of 2006

Fluid Catalytic Cracking VII: ,2011-09-22 Since 1987 the Petroleum Division of the American Chemical Society ACS has sponsored at 3 year intervals an international symposium on fluid cracking catalysts FCC technology This volume collects the recent progress of this technology as reported in the papers presented during the 232th National Meeting of the ACS in San Francisco September 10 14 2006 Sixty six years after the introduction of the fluid cracking catalyst process it remains the main process of gasoline generation for the estimated 237 millions cars on US roads Catalysts testing and evaluation still remains a subject of interest debate and controversy Lambda sweep testing testing of SO_x NO_x and combustion promoters have been discussed in details together with catalyst evaluation for atmospheric residues and metal contaminated oils cracking Of particular interest has been the introduction of novel concept in process design aimed at improving cracked product selectivity such as two stage risers for better gasoline and olefins production and downer technology for high severity processes The importance of solid state nuclear magnetic resonance NMR in the study of crude oils catalysts and reaction products are illustrated by several examples Two contributions describe the use of predictive methods to understand FCC aging and deactivation and personal overviews of the development of SO_x and combustion promoters technology are presented Presents findings from the tri annual international symposium on fluid cracking catalysts FCC technology sponsored by the Petroleum Division of the American Chemical Society ACS Two contributions describe the use of predictive methods to understand FCC aging and deactivation Personal overviews by the authors of the development of SO_x and combustion promoters technology Catalyst Deactivation 1999 B. Delmon, G.F. Froment, 1999-09-22 Studies in catalyst deactivation play a major role in the identification of the real catalytic system in particular the structure and texture of the solid which is often in a metastable state as it is operated in the industrial reactor These studies also allow the identification of the experimental conditions which preserve this active and selective state This is crucial for a real understanding of catalysts and catalysis Another area of catalytic science concerns reactions kinetics which if properly determined are of paramount importance in the elucidation of mechanisms The behavior of the kinetics during aging and deactivation and an accurate modeling of the evolution of activity and selectivity are essential information for the process performance These are just two typical examples but quite generally the science of catalyst deactivation is going to be more oriented to fundamental issues Natural Gas Conversion VIII Fabio Bellot Noronha, Martin Schmal, Eduardo Falabella Sousa-Aguiar, 2011-09-22 This volume contains peer reviewed manuscripts describing the scientific and technological advances presented at the 8th Natural gas Conversion Symposium held in Natal Brazil May 27 31 2007 This symposium continues the tradition of excellence and the status as the premier technical meeting in this area established by previous meetings The manuscripts

have been divided into eight different topics Industrial Processes Economics Technology Demonstration and Commercial Activities Production of Hydrogen from Methane Methanol and Other Sources Production of Synthesis Fischer Tropsch Synthesis of Hydrocarbons From Synthesis Gas to Catalytic Combustion From Natural Gas to Chemicals Light Hydrocarbons and Production and Conversion These are the most interesting subjects in the utilization of natural gas with recent scientific innovation and technological advances The book is of interest to all students and researchers active in utilization of natural gas Research comes from the most important industries and research centres in the field Features new studies from all around the world Important for consulting and updating research and development data *Ideas in Chemistry and Molecular Sciences* Bruno Pignataro, 2010-04-16 Written by some of the most talented young chemists in Europe this text covers most of the groundbreaking issues in materials science It provides an account of the latest research results in European materials chemistry based on a selection of leading young scientists participating in the 2008 European Young Chemists Award competition The contributions range from nanotechnology to catalysis In addition the authors provide a current overview of their field of research and a preview of future directions For materials scientists as well as organic and analytical chemists
