California Agricultural Research Priorities Pierce's Disease:

California Agricultural Research Priorities National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on California Agricultural Research Priorities: Pierce's Disease, 2004-11-28 The glassy winged sharpshooter is one of the more recent invasive pests to afflict California agriculture. The insect transmits a bacterial pathogen that causes Pierce's disease, which has impaired production of wine table and raisin grapes in California. The report recommends strengthening the process and the priorities for research funded by state agencies and wine industry groups to address Pierce's disease and its vector. Research should be focused on identifying feasible options for controlling the spread of the disease and providing sustainable approaches that are adaptable and affordable over the long term. Several avenues of research be pursued more intensely including the genetic makeup of the pathogen that triggers Pierce's disease, understanding the mechanisms that make grapes resistant to the disease, the possibilities of introducing predator enemies to the sharpshooter, and new ways to manage the planting of crops to help avoid spread of the disease. **California**

Yumlembam, 2016-09-19 Food and agriculture is an important component in the development and survival of civilizations. Around half of the world's population and their economies are influenced by agricultural farm production. Plant diseases take as much as a 30 percent toll of the crop harvest if not managed properly and efficiently. Bacterial diseases of crop plants are important in plant disease scenarios worldwide and are observed on all kinds of cultivated and commercial value plants including cereals, pulses, oilseeds, fruits, vegetables, cash crops, plantation crops, spices, ornamentals, and flowering plant, forage crop, forest trees, and lawn grasses. Bacterial diseases are widespread and are difficult to identify and to control. Few pesticides are available for use in control, and many plant pathologists are not well trained in the management of bacterial diseases. **Bacterial Diseases of Crop Plants** offers concise information on bacterial diseases of crops, proving a valuable asset.

to students scientists in industry and academia farmers extension workers and those who deal with crops that are vulnerable to bacterial diseases The book contains 13 chapters featuring bacterial diseases of individual crops and is illustrated with full color photographs throughout providing amazing characterization of the diseases It also includes information on bacterial diseases that appear on different crops across the continents thereby making the content of interest to plant pathologists around the world Bacterial diseases are of great economic concern and their importance in overall losses caused by various other pathogens such as fungi and viruses is often undermined in developing countries

Six-Legged Soldiers Jeffrey A. Lockwood, 2010-07-22 Examines how insects have been used as weapons in wartime conflicts throughout history presenting as examples how scorpions were used in Roman times and hornets nests were used during the Middle Ages in siege warfare and how insects have been used in Vietnam China and Korea

Vector-Borne Diseases Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2008-04-18 Vector borne infectious diseases such as malaria dengue fever yellow fever and plague cause a significant fraction of the global infectious disease burden indeed nearly half of the world's population is infected with at least one type of vector borne pathogen CIESIN 2007 WHO 2004a Vector borne plant and animal diseases including several newly recognized pathogens reduce agricultural productivity and disrupt ecosystems throughout the world These diseases profoundly restrict socioeconomic status and development in countries with the highest rates of infection many of which are located in the tropics and subtropics Although this workshop summary provides an account of the individual presentations it also reflects an important aspect of the Forum philosophy The workshop functions as a dialogue among representatives from different sectors and allows them to present their beliefs about which areas may merit further attention These proceedings summarize only the statements of participants in the workshop and are not intended to be an exhaustive exploration of the subject matter or a representation of consensus evaluation

Changes in the Sheep Industry in the United States National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on the Economic Development and Current Status of the Sheep Industry in the United States, 2008-10-26 The U S sheep industry is complex multifaceted and rooted in history and tradition The dominant feature of sheep production in the United States and thus the focus of much producer and policy concern has been the steady decline in sheep and lamb inventories since the mid 1940s Although often described as an industry in decline this report concludes that a better description of the current U S sheep industry is an industry in transition

Emerging Technologies to Benefit Farmers in Sub-Saharan Africa and South Asia National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on a Study of Technologies to Benefit Farmers in Africa and South Asia, 2009-01-21 Increased agricultural productivity is a major stepping stone on the path out of poverty in sub Saharan Africa and South Asia but farmers there face tremendous

challenges improving production Poor soil inefficient water use and a lack of access to plant breeding resources nutritious animal feed high quality seed and fuel and electricity combined with some of the most extreme environmental conditions on Earth have made yields in crop and animal production far lower in these regions than world averages Emerging Technologies to Benefit Farmers in Sub Saharan Africa and South Asia identifies sixty emerging technologies with the potential to significantly improve agricultural productivity in sub Saharan Africa and South Asia Eighteen technologies are recommended for immediate development or further exploration Scientists from all backgrounds have an opportunity to become involved in bringing these and other technologies to fruition The opportunities suggested in this book offer new approaches that can synergize with each other and with many other activities to transform agriculture in sub Saharan Africa and South Asia

Global Health Impacts of Vector-Borne Diseases National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Global Health, Forum on Microbial Threats, 2016-10-21 Pathogens transmitted among humans animals or plants by insects and arthropod vectors have been responsible for significant morbidity and mortality throughout recorded history Such vector borne diseases including malaria dengue yellow fever and plague together accounted for more human disease and death in the 17th through early 20th centuries than all other causes combined Over the past three decades previously controlled vector borne diseases have resurged or reemerged in new geographic locations and several newly identified pathogens and vectors have triggered disease outbreaks in plants and animals including humans Domestic and international capabilities to detect identify and effectively respond to vector borne diseases are limited Few vaccines have been developed against vector borne pathogens At the same time drug resistance has developed in vector borne pathogens while their vectors are increasingly resistant to insecticide controls Furthermore the ranks of scientists trained to conduct research in key fields including medical entomology vector ecology and tropical medicine have dwindled threatening prospects for addressing vector borne diseases now and in the future In June 2007 as these circumstances became alarmingly apparent the Forum on Microbial Threats hosted a workshop to explore the dynamic relationships among host pathogen s vector s and ecosystems that characterize vector borne diseases Revisiting this topic in September 2014 the Forum organized a workshop to examine trends and patterns in the incidence and prevalence of vector borne diseases in an increasingly interconnected and ecologically disturbed world as well as recent developments to meet these dynamic threats Participants examined the emergence and global movement of vector borne diseases research priorities for understanding their biology and ecology and global preparedness for and progress toward their prevention control and mitigation This report summarizes the presentations and discussions from the workshop

Insecticides Design Using Advanced Technologies Isaac Ishaaya, Ralf Nauen, A. Rami Horowitz, 2007-02-15 In the past insecticide development has been guided mostly by chemo rational and bio rational design based on understanding of the physiology and ecology of insects and crops A limitation in each new class of compounds is the evolution of resistance in populations of key pests which ultimately leads

to control failures This phenomenon and the desire to produce more selective and biorational compounds serve as the driving force to develop advanced technologies for insecticide design Among the highlights of this book are the use of nanotechnology to increase potency of available insecticides the use of genetic engineering techniques for controlling insect pests the development of novel insecticides that bind to unique biochemical receptors the exploration of natural products as a source for environmentally acceptable insecticides and the use of insect genomics and cell lines for determining biological and biochemical modes of action of new insecticides
