Catalysis In The Refining Of Fischer Tropsch Syncrude Rsc Rsc Catalysis Series:

Catalysis in the Refining of Fischer-Tropsch Syncrude Arno de Klerk, Edward Furimsky, 2010 Fischer Tropsch Synthesis FTS has been used on a commercial scale for more than eighty years It was initially developed for strategic reasons because it offered a source of transportation fuels that was independent from crude oil Unlike crude Fischer Tropsch synthetic crude is rich in olefins and oxygenates while being sulphur and nitrogen free Consequently the catalysis involved in refining it is significantly different and only a few catalysts have been developed for the purpose Until now an account of this topic has been missing from the literature despite mounting interest in the technology This is the first book to provide a review and analysis of the literature journal and patent on the catalysis needed to refine syncrude to transportation fuels It specifically highlights the impact of oxygenates and how oxygenates affect selectivity and deactivation This aspect is also related to the refining of biomass derived liquids Topics covered include dimerisation oligomerisation isomerisation hydroisomerisation catalytic cracking hydrocracking and hydrogenation catalytic reforming aromatic alkylation etherification dehydration and some oxygenate and wax specific conversions

Conjugated Linoleic Acids and Conjugated Vegetable Oils Bert Sels, An Philippaerts, 2014-07-11 Conjugated linoleic acids CLA isomers of linoleic acid a compound derived from meat and dairy products Attention was first drawn to their potential anti carcinogen properties in the 1980 s since then further health benefits have been reported and applications in the glue and paint industries as a renewable resource have been explored This comprehensive book presents an overview of the background and research into CLA and examines each of their applications in the context of the chemistry surrounding them and CLA enriched oils The biosynthesis of CLA is presented with a discussion on how animal husbandry could promote CLA production Other chapters examine the current strategies for their synthesis using bespoke catalysts and enzymes Readers from academia and industry will find the layout of the book highly accessible with sections for each application The editors are both active researchers in the field and have brought together a wealth of expertise from across the globe presenting a comprehensive guide to this valuable group of compounds and their potential applications

Soft Nanoparticles for Biomedical Applications José Callejas-Fernández, Joan Estelrich, Manuel Quesada-Pérez, Jacqueline Forcada, 2014-07-17 An overview of different soft nanoparticles including their synthesis characterization and their current and potential uses in medicine and health

Enantioselective Multicatalysed Tandem Reactions Hélène Pellissier, 2014-09-30 A comprehensive overview of enantioselective multicatalysed tandem reactions involving organocatalysts transition metals as well as enzymes in all possible combinations

Semiconductor Quantum Dots Mark Green, 2014 Annotation In the two decades since the term quantum dots was first coined research into this form of nanocrystal has expanded to form its own sub discipline and become a key aspect of materials chemistry Despite the wealth of literature now being published there has not been a book focused on their synthesis until now This book presents an authoritative guide to the synthesis of inorganic and organic quantum dots

Atomically-Precise Methods for Synthesis of Solid Catalysts Sophie Hermans,Thierry Visart de Bocarme,2015 With techniques bridging the gap between surface science and heterogeneous catalysis the book presents a tool kit for anyone wishing to prepare and define solid catalysts *Fundamentals of Biofuels Engineering and Technology* Cataldo De Blasio,2019-04-09 This book explores the use of biomass as an energy source and its application in energy conversion technologies Focusing on the challenges of and technologies related to biomass conversion the book is divided into three parts The first part underlines the fundamental concepts that form the basis of biomass production its feasibility valuation and its potential utilization This part does not consider only how biomass is generated but also methods of assessment The second part focuses on the clarification of central concepts of the biorefinery processes After a preliminary introduction with industrial examples common issues of biochemical reaction engineering applications are analysed in detail The theory explained in this part demonstrates that the chemical kinetics are the core focus in modelling biological processes such as growth decay product formation and feedstock consumption This part continues with the theory of biofuels production including biogas bioethanol biodiesel and Fischer Tropsch synthesis of hydrocarbons The third part of this book gives detailed explanations of preliminary notions related to the theory of thermodynamics This theory will assist the reader when taking into account the concepts treated in the previous two parts of the book Several detailed derivations are given to give the reader a full understanding of the arguments at hand This part also gives literature data on the main properties of some biomass feedstock *Fundamentals of Biofuels Engineering and Technology* will be of interest not only to academics and researchers working in this field but also to graduate students and energy professionals seeking to expand their knowledge of this increasingly important area **Economic Synthesis of Heterocycles** Xiao-Feng Wu,Matthias Beller,2014-05-01

Heterocycle synthesis is one of the largest areas of modern organic chemistry Heterocycles have a broad range of applications including pharmaceuticals agrochemicals and dyes and are the core structure to around 90% of naturally occurring molecules Transition metal catalysts have become favoured in heterocycle synthesis not least because of their low cost but also due to their relatively low environmental toxicity and biocompatibility This book presents an overview of the state of the art in transition metal catalysis for heterocycle synthesis Each metal is discussed in turn presenting a comprehensive source of information on the use of zinc iron copper cobalt manganese and nickel in a sustainable and economic manner Referencing the latest primary literature and authored by active researchers in the field this book is a must have resource for anyone wishing to undertake an economic and sustainable approach to heterocycle synthesis

Organocatalytic Enantioselective Conjugate Addition Reactions Jose L. Vicario,2010 This book unique in its field is a comprehensive description of all the methodologies reported for carrying out conjugate addition reactions in a stereoselective way using small chiral organic molecules as catalysts organocatalysts In the last 3 4 years this has been a rapidly growing field in organic chemistry and many papers have appeared reporting excellent protocols for carrying out

these highly efficient transformations that compete well with other classical approaches using transition metal catalysts. A particularly attractive feature of this transformation relies upon the fact that the conjugate addition Michael and Hetero Michael reactions is an extraordinarily effective means to initiate cascade processes which result in the formation of complex molecules from very small and simple starting blocks. The book written by noted experts covers all recent advances in this hot topic and provides a good state of the art review for organic chemists working in this field and all those who wish to start projects in this area.

Asymmetric Domino Reactions Hélène Pellissier, 2013. This book covers the latest developments in asymmetric domino reactions focussing on those published in the last 6 years. These fascinating reactions have rapidly become one of the most current fields in organic chemistry since they allow reaching easily high molecular complexity in an economically favourable way with advantages of savings in solvent, time, energy and costs. Unsurprisingly the high levels of efficiency and enantioselectivity generally reached in these reactions have been exploited for the production of a wide number of complex chiral molecules with dense stereochemistry and functionality which are motifs present in biologically active compounds and natural products. The book is divided into three principal sections dealing successively with asymmetric domino reactions based on the use of chiral auxiliaries, asymmetric domino reactions based on the use of chiral metal catalysts and asymmetric domino reactions based on the use of chiral organocatalysts covering the literature since the beginning of 2006.
