The SAGE Encyclopedia of Research Design Bruce B. Frey, 2022-01-27 The SAGE Encyclopedia of Research Design maps out how one makes decisions about research design interprets data and draws valid inferences undertakes research projects in an ethical manner and evaluates experimental design strategies and results From A to Z this four volume work covers the spectrum of research design strategies and topics including among other things fundamental research design principles ethics in the research process quantitative versus qualitative and mixed method designs completely randomized designs multiple comparison tests diagnosing agreement between data and models fundamental assumptions in analysis of variance factorial treatment designs complete and incomplete block designs Latin square and related designs hierarchical designs response surface designs split plot designs

repeated measures designs crossover designs analysis of covariance statistical software packages and much more Research design with its statistical underpinnings can be especially daunting for students and novice researchers At its heart research design might be described simply as a formalized approach toward problem solving thinking and acquiring knowledge the success of which depends upon clearly defined objectives and appropriate choice of statistical design and analysis to meet those objectives The SAGE Encyclopedia of Research Design will assist students and researchers with their work while providing vital information on research strategies

The Grammar of Graphics Leland Wilkinson, 2006-01-28 Preface to First Edition Before writing the graphics for SYSTAT in the 1980 s I began by teaching a seminar in statistical graphics and collecting as many different quantitative graphics as I could find I was determined to produce a package that could draw every statistical graphic I had ever seen The structure of the program was a collection of procedures named after the basic graph types they produced The graphics code was roughly one and a half megabytes in size In the early 1990 s I redesigned the SYSTAT graphics package using object based technology I intended to produce a more comprehensive and generic package I accomplished this by embedding graphical elements in a tree structure Rendering graphics was done by walking the tree and editing worked by adding and deleting nodes The code size fell to under a megabyte In the late 1990 s I collaborated with Dan Rope at the Bureau of Labor Statistics and Dan Carr at George Mason University to produce a graphics production library called GPL this time in Java Our goal was to develop graphics components This book was nourished by that project So far the GPL code size is under half a megabyte

Factor Analysis and Dimension Reduction in R G. David Garson, 2022-12-16 Factor Analysis and Dimension Reduction in R provides coverage with worked examples of a large number of dimension reduction procedures along with model performance metrics to compare them Factor analysis in the form of principal components analysis PCA or principal factor analysis PFA is familiar to most social scientists However what is less familiar is understanding that factor analysis is a subset of the more general statistical family of dimension reduction methods The social scientist s toolkit for factor analysis problems can be expanded to include the range of solutions this book presents In addition to covering FA and PCA with orthogonal and oblique rotation this book s coverage includes higher order factor models bifactor models models based on binary and ordinal data models based on mixed data generalized low rank models cluster analysis with GLRM models involving supplemental variables or observations Bayesian factor analysis regularized factor analysis testing for unidimensionality and prediction with factor scores The second half of the book deals with other procedures for dimension reduction These include coverage of kernel PCA factor analysis with multidimensional scaling locally linear embedding models Laplacian eigenmaps diffusion maps force directed methods t distributed stochastic neighbor embedding independent component analysis ICA dimensionality reduction via regression DRR non negative matrix factorization NMF Isomap Autoencoder uniform manifold approximation and projection UMAP models neural network models and longitudinal factor analysis models In addition a special chapter covers metrics for comparing model

performance Features of this book include Numerous worked examples with replicable R code Explicit comprehensive coverage of data assumptions Adaptation of factor methods to binary ordinal and categorical data Residual and outlier analysis Visualization of factor results Final chapters that treat integration of factor analysis with neural network and time series methods Presented in color with R code and introduction to R and RStudio this book will be suitable for graduate level and optional module courses for social scientists and on quantitative methods and multivariate statistics courses
