Catalysis In Petroleum And Petrochemical Industries:

Catalysis in Petroleum and Petrochemical Industries Krishna G. Bhattacharyya, Anup K. Talukdar, 2005 Focuses on the use of catalysis in the Oil Refineries and in the Petrochemical Industries with particular reference to understanding the basic processes development of appropriate catalysts their characterization techniques and laboratory scale studies on important chemical reactions having relevance to the Petroleum Industry

Catalysts in Petroleum Refining and Petrochemical Industries 1995 M. Absi-Halabi, J. Beshara, H. Qabazard, Anthony Stanislaus, 1996-01-15 Catalysis plays an increasingly critical role in modern petroleum refining and basic petrochemical industries as market demands for and specifications of petroleum and petrochemical products are continuously changing As we enter the 21st century new challenges for catalysis science and technology are anticipated in almost every field Particularly better utilization of petroleum resources and demands for cleaner transportation fuels are major items It was against this background that the 2nd International Conference on Catalysts in Petroleum Refining and Petrochemical Industries was organized The conference was attended by around 300 specialists in the catalysis field from both academia and industry from over 30 countries It provided a forum for the exchange of ideas between scientists and engineers from the region with their counterparts from industrialized countries The papers from the conference which were carefully selected from around 100 submissions were refereed in terms of scientific and technical content and format in accordance with internationally accepted standards They comprise a mix of reviews providing an overview of selected areas original fundamental research results and industrial experiences

Catalysis in Petrochemical Processes M.S. Matar, M.J. Mirbach, H.A. Tayim, 2012-12-06 The field of petrochemicals started some years ago with the simple addition reaction of water to propylene for the production of isopropyl alcohol Currently the petrochemical industry has become a multi billion dollar enterprise which encompasses a wide field of chemical products Almost all the basic organic reactions such as hydrogenation alkylation substitution polymerization etc are utilized for the production of these chemicals It may not however have been possible to establish this huge industry without the use of different catalysts In other words the great advancements in the catalytic area have supported the vast developments in the petrochemical field In this book we have adopted the idea of discussing the petrochemical industry from the point of view of reactants activities and susceptibilities toward different catalysts The book is thus classified according to the reaction type This will enable students and other users of the book to base their understanding of the petrochemical field on the fundamental principles learned in chemistry However the first chapter is aimed at establishing some basic facts on the petrochemical industry and its major uses It discusses without going into details the raw materials used the intermediates and the downstream products The next eight chapters discuss in some detail the main reactions and the catalysts used for the production of chemicals and polymers from petroleum The last chapter is devoted to a discussion of some of the practical techniques used in the catalytic field
