Measuring Entrepreneurship Emilio Congregado, 2007-11-15 Entrepreneurship is playing an increasingly important role in the political agenda This phenomenon is due to the increasing influence of politics on the entrepreneurial promotion of growth and employment objectives This results in the need to satisfy the new demand for statistical information in two ways On the one hand quantitative information stock and flow analysis on the other hand qualitative information which tries to assess the ability to create wealth and employment and to innovate and export among others Consequently searching a systematic set of indicators that allows us to understand the basic entrepreneurship dimensions in order to diagnose forecast and monitor entrepreneurial networks is crucial for both the research agenda and the political action agenda However the lack of this kind of statistical information is clear if we review some statistical subsystems on entrepreneurship on a comparison basis The few essays on the subject are still in an initial stage The reference theoretical framework to set the key dimensions to be analysed is to be established yet The search for indicators and even the articulation of specific statistics have become crucial in order to make progress in the applied research and to design implement and assess the different measurements of public intervention on this subject Thus the development of a set of indicators that allow us to satisfactorily capture the different dimensions of the entrepreneurial network for a specific sector or territory becomes a basic element to assist progress in entrepreneurship knowledge
