

Solution Manual for Design and Analysis of Experiments 10th Edition Douglas C. Montgomery

Full download chapter at: <https://testbankbell.com/product/solution-manual-for-design-and-analysis-of-experiments-10th-edition-douglas-c-montgomery/>

Chapter 1 Introduction Solutions

1.1S. Suppose that you want to design an experiment to study the proportion of unpopped kernels of popcorn. Complete steps 1-3 of the guidelines for designing experiments in Section 1.4. Are there any major sources of variation that would be difficult to control?

Step 1 – Recognition of and statement of the problem. Possible problem statement would be – find the best combination of inputs that maximizes yield on popcorn – minimize unpopped kernels.

Step 2 – Selection of the response variable. Possible responses are number of unpopped kernels per 100 kernels in experiment, weight of unpopped kernels versus the total weight of kernels cooked.

Step 3 – Choice of factors, levels and range. Possible factors and levels are brand of popcorn (levels: cheap, expensive), age of popcorn (levels: fresh, old), type of cooking method (levels: stovetop, microwave), temperature (levels: 150C, 250C), cooking time (levels: 3 minutes, 5 minutes), amount of cooking oil (levels, 1 oz, 3 oz), etc.

1.2. Suppose that you want to investigate the factors that potentially affect cooked rice.

- (a) What would you use as a response variable in this experiment? How would you measure the response?
- (b) List all of the potential sources of variability that could impact the response.
- (c) Complete the first three steps of the guidelines for designing experiments in Section 1.4.

Step 1 – Recognition of and statement of the problem.

Step 2 – Selection of the response variable.

Step 3 – Choice of factors, levels and range.
