Fontana [and] Norbert D. Greene Mars Guy Fontana, Norbert D. Greene, 1967 *Advances in Corrosion Science and Technology* Mars G. Fontana, Roger W. Staehle, 2012-12-06 This series was organized to provide a forum for review papers in the area of corrosion The aim of these reviews is to bring certain areas of corrosion science and technology into a sharp focus The volumes of this series are published approximately on a yearly basis and each contains three to five reviews The articles in each volume are selected in such a way as to be of interest both to the corrosion scientists and the corrosion technologists There is in fact a particular aim in juxtaposing these interests because of the importance of mutual interaction and interdisciplinarity so important in corrosion studies It is hoped that the corrosion scientists in this way may stay abreast of the activities in corrosion technology and vice versa In this series the term corrosion is used in its very broadest sense It includes therefore not only the degradation of metals in aqueous environment but also what is commonly referred to as high temperature oxidation Further the plan is to be even more general than these topics the series will include all solids and all environments Today engineering solids include not only metals but

glasses ionic solids polymeric solids and composites of these Environments of interest must be extended to liquid metals a wide variety of gases nonaqueous electrolytes and other non aqueous liquids

Fundamentals of Materials Science and Engineering William D. Callister, Jr., David G. Rethwisch, 2012 This text treats the important properties of the three primary types of materials metals ceramics and polymers as well as composites and the relationships that exist between the structural elements of these materials and their properties Emphasis is placed on mechanical behavior and failure including techniques that are employed to improve the mechanical and failure characteristics in terms of alteration of structural elements Furthermore individual chapters discuss each of corrosion electrical thermal magnetic and optical properties New and cutting edge materials are also discussed Even if an instructor does not have a strong materials background i e is from mechanical civil chemical or electrical engineering or chemistry departments he or she can easily teach from this text The material is not at a level beyond which the students can comprehend an instructor would not have to supplement in order to bring the students up to the level of the text Also the author has attempted to write in a concise clear and organized manner using terminology that is familiar to the students Extensive student and instructor resource supplements are also provided
