

Design and the Elastic Mind

MoMA The Museum of Modern Art

Over the past twenty-five years, people have weathered dramatic changes in their experience of time, space, matter, and identity. Individuals cope daily with a multitude of change: pace—working across several time zones, traveling with relative ease between satellite maps and nanoscale images, and being inundated with information. Adaptability is an ancient intelligence, but today's instant variations in rhythm call for something stronger: elasticity, the product of adaptability plus acceleration. *Design and the Elastic Mind* explores the relationship between science and design in the contemporary world by bringing together design objects and concepts that marry the most advanced scientific research with attuned human limitations, habits, and aspirations. The exhibition highlights designers' ability to grasp momentous changes in technology, science, and history—changes that demand adjustments in human behavior—and translate them into objects that people can actually understand and use. This Web site presents over three hundred of these works, included are not featured in the gallery exhibition.

Design for Debate

Design for Debate is a new type of practice that devises ways to discuss the social, cultural, and ethical implications of emerging technologies by presenting not only artifacts, but also the rhetorical scenarios that go with them. These projects shamelessly place the human being at the center of the universe and seek to take into account scientific and technological progress while respecting and preserving our essence as individuals.

Visualization

We live in an age when information is more prolific and widely available than ever before, and to visualize it is to understand it. The projects in this category demonstrate the ways in which designers and scientists tackle the extremely small and the extremely large in order to bring them to a human scale, facilitating our ability to comprehend great amounts of data.

Thought to Action

Designers have been working to envision not just objects, but also new methods of manufacture and behavioral rules that establish the future of design forms and capabilities. 3-D printing enables digital images to be directly printed into objects. Processing is a new design tool that, despite its simplicity, is valuable in high-level design projects. And algorithms define how objects will evolve and respond to their circumstances, which, in a way, gives them lives of their own.

All Together Now!

All Together Now! explores the relationship between individuals and the collective sphere. This collection introduces the concept of Elastic Movement and examines the impact that movement has on design and on the individual. It identifies designers engaged in harvesting the data of our environment.
