Coastlines Of Western Africa Coastlines Of The World:

Coastlines of Western Africa Larry F. Awosika, A. Chidi Ibe, Peter Shroader, 1993 This collection contains 30 papers presented at Coastlines of Western Africa part of Coastal Zone 93 the Eighth Symposium on Coastal and Ocean Management held in New Orleans Louisiana July 19 23 1993 Part of the Coastlines of the World series **The Coastlines of the World with Google Earth** Anja M. Scheffers, Sander R. Scheffers, Dieter H. Kelletat, 2012-03-06 Far away shores exotic islands or adventurous sea voyages coasts are the destination of dreams for millions of people around the globe Large numbers of people also call coasts their home in many countries a narrow coastal strip is densely populated making these places vulnerable to marine natural hazards such as storms or tsunamis The book *Coastlines of the World with Google Earth* aims to draw people's attention within and outside of the science community towards coastal sciences and spark interest for the extraordinary diversity and beauty of coastal environments The book illustrates the fascinating variety of coastal landscapes using images from Google Earth's virtual globe that allow us to explore the world and demonstrate knowledge and applications of coastal science in many different fields in an engaging visual tour The book of Anja and Sander Scheffers and Dieter Kelletat is a true cornucopia for everyone both scientists and laymen interested in coastal geomorphology On the one hand it documents the enormous significance of Google Earth for coastal science issues and shows how powerful this tool is for visualizing coastal features and processes On the other hand the reader gets a vivid insight in the many varieties of coastal science and its applications This is especially true with regard to coastal hazards such as extreme events and global sea level rise knowing that the vulnerability of coastal zones has dramatically increased during the past decades The fact that the book is so attractive and inspiring to both beginners and experts is also due to the huge experience that the authors have gained during their manifold research activities Andreas V t Johannes Gutenberg Universit t Mainz Germany This book will have great appeal to coastal researchers at both beginning and advanced stages because it integrates Google satellite imagery with coastal marine classification and in depth studies by the authors from many parts of the world The world's coastline is well represented in this book which has a truly global perspective of unique dramatic and commonplace coastal landforms The authors in collaboration with the publisher have prepared a very handsome volume that will no doubt become a classic in the fullness of time This book represents one of the first efforts to utilize Google images in a scientific manner to illustrate the diversity of coastal morphologies on a worldwide basis The plethora of color satellite images block diagrams and oblique photography makes this book a valuable resource for a wide array of specialists that will want to have handy access to this unique work This coastal compendium is an illustrated tour de force that belongs on researchers bookshelves as well as on coffee tables for casual enjoyment Charles Finkl Florida Atlantic University Boca Raton FL USA **Coasts of the World** Miles O. Hayes, 2014-01-01 This is a book of color photographs by coastal geologist Miles O Hayes designed to illustrate the fascinating complexity of the coasts of the world Hayes has conducted research in 42 countries on all the major

continents as well as field sessions near both the North and South Poles The photographs are grouped into five major geomorphic categories 1 Steep mountainous coasts that usually occur on the leading edges of continental plates e g southeast Alaska Baja California 2 Coastal plain and deltaic coasts that are most common on the trailing edges of continental plates e g southeastern USA 3 Older shorelines backed by plateaus and pre Cambrian shields e g West Africa Oman 4 Large lakes and marginal sea coasts e g Arabian Persian Gulf Great Lakes and 5 Glaciated coasts both Holocene and Pleistocene e g Iceland Strait of Magellan A large number of oblique aerial photographs taken in all of these areas dominate the set

Metcalf, 2020-10-13 How did intricately detailed sixteenth century maps reveal the start of the Atlantic World Beginning around 1500 in the decades following Columbus's voyages the Atlantic Ocean moved from the periphery to the center on European world maps This brief but highly significant moment in early modern European history marks not only a paradigm shift in how the world was mapped but also the opening of what historians call the Atlantic World But how did sixteenth century chartmakers and mapmakers begin to conceptualize and present to the public an interconnected Atlantic World that was open and navigable in comparison to the mysterious ocean that had blocked off the Western hemisphere before Columbus's exploration In Mapping an Atlantic World circa 1500 Alida C Metcalf argues that the earliest surviving maps from this era which depict trade colonization evangelism and the movement of peoples reveal powerful and persuasive arguments about the possibility of an interconnected Atlantic World Blending scholarship from two fields historical cartography and Atlantic history Metcalf explains why Renaissance cosmographers first incorporated sailing charts into their maps and began to reject classical models for mapping the world Combined with the new placement of the Atlantic the visual imagery on Atlantic maps which

featured decorative compass roses animals landscapes and native peoples communicated the accessibility of distant places with valuable commodities Even though individual maps became outdated quickly Metcalf reveals new mapmakers copied their imagery which then repeated on map after map Individual maps might fall out of date be lost discarded or forgotten but their geographic and visual design promoted a new way of seeing the world with an interconnected Atlantic World at its center Describing the negotiation that took place between a small cadre of explorers and a wider class of cartographers chartmakers cosmographers and artists Metcalf shows how exploration informed mapmaking and vice versa Recognizing early modern cartographers as significant agents in the intellectual history of the Atlantic Mapping an Atlantic World circa 1500 includes around 50 beautiful and illuminating historical maps Atlantic Ocean Jen Green,2006 Oceans and Seas is an authoritative and comprehensive guide to Earth's great bodies of water Each volume contains a wealth of information including physical features surface area and depth how the ocean was formed plate movements coastlines islands and more climate including tides currents trade winds hurricanes and tsunamis marine life the history of human settlement along the shores transportation and navigation natural resources and current threats including the effects of pollution overfishing and mining Numerous maps charts fact boxes and primary source quotations supplement the text Supporting both the science and social studies curriculum this series is truly an indispensable resource The World's Beaches Orrin H. Pilkey,William J. Neal,James Andrew Graham Cooper,Joseph T. Kelley,2011-07-26 Take this book to the beach it will open up a whole new world Illustrated throughout with color photographs maps and graphics it explores one of the planet's most dynamic environments from tourist beaches to Arctic beaches strewn with ice chunks to steaming hot tropical shores The World's Beaches tells how beaches work explains why they vary so much and shows how dramatic changes can occur on them in a matter of hours It discusses tides waves and wind the patterns of dunes washover fans and wrack lines and the shape of berms bars shell lags cusps ripples and blisters What is the world's longest beach Why do some beaches sing when you walk on them Why do some have dark rings on their surface and tiny holes scattered far and wide This fascinating comprehensive guide also considers the future of beaches and explains how extensively people have affected them from coastal engineering to pollution oil spills and rising sea levels The Surfer's Guide to Waves, Coasts and Climates Tony Butt,2009 Surfing
