Developers Workshop To Com And Atl 30:

Developer's Workshop to COM and ATL 3.0 Andrew W. Troelsen, 2000-06-30 Microsoft's Component Object Model is one of the most important concepts in software development today Developer's Workshop to COM and ATL 3.0 provides an in depth treatment of COM and shows how to adopt a component framework namely ATL to help lessen the burden of repetitive code Every chapter contains integrated lab assignments that give you numerous opportunities to build COM clients and servers using raw C and IDL as well as the Active Template Library The book is divided into five sections each focusing on a particular aspect of COM and ATL development The book begins with a review of object oriented and interface based programming techniques then moves into the core aspects of COM including a full examination of language independence and location transparency The author illustrates the numerous CASE tools used during ATL development and discusses apartments COM exceptions object identity and component housing in addition to various advanced concepts such as COM categories and tear off interfaces The fourth section examines a number of COM patterns such as enumerators collections scriptable objects and callback interfaces The book closes with an investigation of using ATL as a windowing framework and wraps up with the development of a full blown animated ActiveX control using ATL Learn how to build Visual Basic Java C and web based COM clients use common VBA programming structures such as conditions loops arrays and collections master ATL's integrated CASE tools dive into the details of object identity and the ATL COM map build COM object models and leverage the ATL object map develop full ActiveX controls with ATL

Illusions of Location Theory: Consequences for Blue Economy in Africa Francis Onditi, Douglas Yates, 2021-01-05 Illusions of Location Theory Consequences for Blue Economy in Africa questions the relevance of location theory in explaining the coastal hinterland continuum and the implications for the utilization of blue economy ecosystem in such a contested space in Africa It pays more attention to territorial contestations maritime disputes vulnerabilities of landlocked states and expansionist policies as displayed through spatial organizational regimes These areas of investigation have previously been largely studied from the narrow perspective of location unduly focusing on comparative advantages of distance while neglecting the influence of forces such as technology ideology and the power of mental mapping in spatial decision making This volume puts forward the argument that the harmonious relationship between states and efficient exploitation of the blue economy ecosystem in ways that promote peace between states lies not only in the structural transformation of markets but also in bridging the spatial and social divide between the coastal and hinterland societies Thus this work proffers possibilities for a holistic regime for managing Africa's coastal hinterland continuum through innovative

strategies such as SMART blue economies and the infusion of the geopolitical dimension into the management of maritime and territorial diplomacy The combination of theoretical and empirical analysis buttressed by in depth case studies of what works in the management of blue economy ecosystem and what does not work make this volume ideal for researchers students and practitioners interested in African regional studies African political economy political geography strategic military studies governance of seas and oceans and maritime science diplomacy

Theory and Practice of Model Transformations Richard F. Paige, 2009-06-29 Models have become essential for supporting the development analysis and evolution of large scale and complex IT systems Models allow different views perspectives and elements of a system to be captured rigorously and precisely thus allowing automated tools to manipulate and manage the models In a full edged model driven engineering MDE process the transformations developed and pressed between models are also key Model transformations allow the definition and implementation of the operations on models and also provide a chain that enables the automated development of a system from its corresponding models Model transformations are already an integral part of any model driven approach and there are a number of available model transformation languages tools and supporting environments some of these approaches are now approaching maturity Nevertheless much work remains the research community and industry need to better understand the foundations and implications of model transformations such as the key concepts and operators supporting transformation languages their semantics and their structuring mechanisms and properties e.g modularity composability and parametrization The effect of using model transformations on organizations and development processes particularly when applied to ultra large scale systems or in distributed enterprises is still not clear These issues and others related to the specification design implementation analysis and experimentation with model transformation are the focus of these proceedings The Second International Conference on Model Transformation ICMT 2009 was held in late June 2009 in Zurich Switzerland

solutions and to shape new trends in computational science ICCSA 2010 was celebrated at the host university Kyushu Sangyo University Fukuoka Japan as part of the university's 50th anniversary We would like to thank Kyushu Sangyo University for hosting ICCSA this year and for including this international event in their celebrations Also for the first time this year ICCSA organized poster sessions that present on going projects on various aspects of computational sciences Nanosatellites Rogerio Atem de Carvalho, Jaime Estela, Martin Langer, 2020-03-16 Nanosatellites Space and Ground Technologies Operations and Economics Rogerio Atem de Carvalho Instituto Federal Fluminense Brazil Jaime Estela Spectrum Aerospace Group Germany and Peru Martin Langer Technical University of Munich Germany Covering the latest research on nanosatellites Nanosatellites Space and Ground Technologies Operations and Economics comprehensively presents the latest research on the fast developing area of nanosatellites Divided into three distinct sections the book begins with a brief history of nanosatellites and introduces nanosatellites technologies and payloads also explaining how these are deployed into space The second section provides an overview of the ground segment and operations and the third section focuses on the regulations policies economics and future trends Key features Payloads for nanosatellites Nanosatellites components design Examines the cost of development of nanosatellites Covers the latest policies and regulations Considers future trends for nanosatellites Nanosatellites Space and Ground Technologies Operations and Economics is a comprehensive reference for researchers and practitioners working with nanosatellites in the aerospace industry **European Access to Space: Business and Policy Perspectives on Micro Launchers** Matteo Tugnoli, Martin Sarret, Marco Aliberti, 2018-05-31 The book provides an analysis of the dynamics of the global launch service market associated with small satellites by placing a particular focus on its unfolding trends and future outlook From an economic perspective the emergence of numerous micro launcher initiatives on top of already existing launch solutions for small satellites raises questions about the specific nature and size of the small satellite market that will or could be addressed by these emerging launch services offerings Identifying the specific features of such market by characterizing customers expectations and providing a competitive analysis of the different launch solutions for small satellites is the second objective of this report Finally and from a policy perspective the book reflects on whether such market could and should be handled on a purely private basis in the European context or on the contrary generates relevant stakes that compels European institutional actors to become more actively involved in this domain *MSDN Magazine*, 2000 **Achieving Science with CubeSats** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Achieving Science Goals with CubeSats, 2016-11-06 Space based observations have transformed our understanding of Earth its environment the solar system and the universe at large During past decades driven by increasingly advanced science questions space observatories have become more sophisticated and more complex with costs often growing to billions of dollars Although these kinds of ever more sophisticated missions will continue into the future small satellites ranging in mass between 500 kg to 0.1 kg are

gaining momentum as an additional means to address targeted science questions in a rapid and possibly more affordable manner. Within the category of small satellites, CubeSats have emerged as a space platform defined in terms of 10 cm x 10 cm x 10 cm sized cubic units of approximately 1–3 kg each, called U.S. Historically, CubeSats were developed as training projects to expose students to the challenges of real-world engineering practices and system design. Yet their use has rapidly spread within academia, industry, and government agencies both nationally and internationally. In particular, CubeSats have caught the attention of parts of the U.S. space science community, which sees this platform despite its inherent constraints as a way to affordably access space and perform unique measurements of scientific value. The first science results from such CubeSats have only recently become available; however, questions remain regarding the scientific potential and technological promise of CubeSats in the future. *Achieving Science with CubeSats* reviews the current state of the scientific potential and technological promise of CubeSats. This report focuses on the platform's promise to obtain high-priority science data as defined in recent decadal surveys in astronomy and astrophysics, Earth science and applications from space, planetary science and solar and space physics, heliophysics, the science priorities identified in the 2014 NASA Science Plan, and the potential for CubeSats to advance biology and microgravity research. It provides a list of sample science goals for CubeSats, many of which address targeted science often in coordination with other spacecraft or use sacrificial or high-risk orbits that lead to the demise of the satellite after critical data have been collected. Other goals relate to the use of CubeSats as constellations or swarms, deploying tens to hundreds of CubeSats that function as one distributed array of measurements.
