

CNSP – Production Practice Test

Instructions

This packet contains sample items for the CNSP – Production test. The items contained in this packet are meant to provide individuals with an idea of what to expect when they take the test. Answers for the sample items are listed on the last page.

There are two sections to the test:

Team Member Assessment Test Description

This online test simulates a series of manufacturing tasks and activities. All candidates will have the opportunity to go through an online tutorial and complete some practice questions before beginning the actual test. Below are descriptions of each test section and examples of the types of questions on this test.

The questions in this test are divided into five sections.

1. Product Classification

This section measures your ability to match product features to product models. You will first review a list of products and product features and then you will be asked to select the relevant product features for a series of images of products.

2. Initial Assembly

This section measures your ability to quickly and accurately follow a plan to build a model while monitoring the quality of the component parts. You will be shown two models: the assembled frame (example) and the unassembled frame with a supply of parts. You will be asked to follow a structured work process, including conducting a quality check on each part, to assemble the frame using the available parts.

3. Process Monitoring

This section measures your ability to monitor and correct out-of-range variances. You will be shown a panel of gauges used to monitor a manufacturing process. For each gauge panel you will be asked to determine if any of the gauges are outside of acceptable tolerance limits. The tolerance limits will be provided for each gauge.

4. Final Assembly

This section measures your ability to quickly and accurately adapt to changing assembly requirements. You will be asked to build five different products while managing your parts supply and requesting parts refills as needed.

5. Quality Assurance

This section assesses your ability to spot errors in finished products. You will be asked to examine finished products to determine if the products comply with quality standards.
