

Cognition and Tool Use

BETH PRESTON

Abstract: Tool use rivals language as an important domain of cognitive phenomena, and so as a source of insight into the nature of cognition in general. But the favoured current definition of tool use is inadequate because it does not carve the phenomena of interest at the joints. Heidegger's notion of equipment provides a more adequate theoretical framework. But Heidegger's account leads directly to a non-individualist view of the nature of cognition. Thus non-individualism is supported by concrete considerations about the nature of tools and tool use.

1. Introduction

Language has received a great deal of attention from philosophers in this century in both the Anglo-American and the Continental traditions. There is no comparable philosophical literature on artefacts or tools.¹ This should be surprising, if only because the pervasively linguistic nature of our everyday human environment is rivalled only by its pervasive artefactuality. But why should tools and other artefacts matter to philosophy? For the same reason language matters. As Ian Hacking puts it:

It matters for the reason that ideas mattered in seventeenth-century philosophy, because ideas then, and sentences now, serve as the interface between the knowing subject and what is known. (Hacking, 1975, p. 187; emphasis in original)

Too many people have made helpful comments on this paper for me to thank them all individually. However, two people—Dorothy Frigaszy and Paul Graves-Brown—deserve special thanks for the time and effort they have expended introducing me to the relevant literature in their respective fields. Earlier versions of this paper were presented at the Third In-House Conference of the Center for Philosophy of Science at the University of Pittsburgh, and at the 1995 meeting of the Society for Philosophy and Psychology. Address for correspondence: Philosophy Department, University of Georgia, Athens, GA 30602-1627, USA. Email: epreston@ai.uga.edu.

¹ I recently discovered startling evidence of this, as a result of my department's acquisition of *The Philosopher's Index* on CD-ROM. There are 15,736 entries under the subject heading 'language' as of this writing. Under 'tool' there are 28, and another 94 under 'artifact'. This lacuna is also noted by Dipert, 1993, who points out that it is apparent from the beginning in the annals of Western thought, and discusses some possible reasons for it.

Cognition and Tool Use Christopher Baber, 2003-07-24 The ability to use tools is a distinguishing feature of human beings It represents a complex psychomotor activity that we are only now beginning to comprehend Robust new theoretical accounts allow us to better understand how people use tools and explain differences in human and animal tool use from the perspective of cognitive science Our understanding needs to be grounded upon research into how people use tools which draws upon many disciplines from ergonomics to anthropology to cognitive science to neuropsychology **Cognition and Tool Use** Forms of Engagement in Human and Animal Use of Tools presents a single coherent account of human tool use as a complex psychomotor activity It explains how people use tools and how this activity can succeed or fail then describes the design and development of usable tools This book considers contemporary tool use in domains such as surgery and considers future developments in human computer interfaces such as haptic virtual reality and tangible user interfaces No other single text brings together the research from the different disciplines ranging from archaeology and anthropology to psychology and ergonomics which contribute to this topic Graduate students professionals and researchers will find this guide to be invaluable

Cognition and Tool Use Charles M. Keller, Janet Dixon Keller, 1996-09-28 Anthropologists Janet and Charles Keller provide an account of human accomplishment based on ethnographic study Blacksmithing the transformation of glowing iron into artistic and utilitarian products is the activity they chose to develop a study of situated learning This domain permeated by visual imagery and physical virtuosity rather than verbal logic appears antithetical to the usual realms of cognitive study For this reason it provides a new entree to human thought and an empirical test for an anthropology of knowledge

Tool Use in Animals Crickette Marie Sanz, Josep Call, Christophe Boesch, 2013 The last decade has witnessed remarkable discoveries and advances in our understanding of the tool using behaviour of animals Wild populations of capuchin monkeys have been observed to crack open nuts with stone tools similar to the skills of chimpanzees and humans Corvids have been observed to use and make tools that rival in complexity the behaviours exhibited by the great apes Excavations of the nut cracking sites of chimpanzees have been dated to around 4 5 thousand years ago **Tool Use in Animals** collates these and many more contributions by leading scholars in psychology biology and anthropology along with supplementary online materials into a comprehensive assessment of the cognitive abilities and environmental forces shaping these behaviours in taxa as distantly related as primates and corvids

The cognitive and neural bases of human tool use François Osiurak, Cristina Massen, 2015-02-12 Humans are not unique in using tools But human tool use differs from that known to occur in nonhumans in being very frequent spontaneous and diversified So a fundamental issue is what are the cognitive and neural bases of human tool use This Research Topic of Frontiers provides a venue for leading researchers in the field of tool use to present original research papers integrative reviews or theoretical articles that further our understanding of this topic Articles address a wide range of issues including for instance the nature of the underlying representations e g conceptual sensorimotor the mechanisms supporting the incorporation of tools into body schema the link between imitation and tool use or the evolutionary origins of human tool use Articles are included from experimental psychology neuropsychology neuroimaging neurophysiology developmental psychology ethology comparative psychology and ergonomics The goal of this Research Topic of Frontiers is to provide a state of the art view of the field Tool Use and Causal Cognition Teresa McCormack, Christoph Hoerl, Stephen

Butterfill, 2011-08-25 Studies of tool use have been used to examine an exceptionally wide range of aspects of cognition such as planning problem solving and insight naive physics social relationship between action and perception *The Mentalities of Gorillas and Orangutans* Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution In contrast less attention has been paid to the abilities of gorillas and orangutans This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees bonobos and humans The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes including performances in the classic domains of tool use and tool making imitation self awareness social communication and symbol use All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove Hot Pursuit Alysia

Freeberg, Amanda R. Ridley, Patrizia d'Ettorre, 2022-08-31 The Routledge International Handbook of Comparative Psychology is an international reference work that offers scientists and students a balanced overview of current research in the field of comparative psychology and animal behavior The book takes an integrative approach to animal behavior with most of the chapters discussing research involving both proximate developmental and mechanistic and ultimate functional and phylogenetic levels of analysis Chapters cover

the major ideas of core topics in the field and examine emerging research trends to provide readers deeper understanding of these ideas One of the strengths of this book is its the coverage of core topics in comparative psychology and animal behavior from different and diverse perspectives The diverse perspectives come from the wide range of focal species studied by chapter authors a range traditionally quite atypical for comparative psychology and from the widespread international representation of the authors and the diversity of departments and research centers at which these authors work in The first part of the Handbook examines historical and foundational principles and theories in the field The second part focuses on individual behavior systems The final part of the book is devoted to a diversity of ideas that extend our understanding of behavior into new directions The Routledge International Handbook of Comparative Psychology is an essential resource for advanced undergraduate and graduate students postdoctoral researchers and established academics as well as others who are interested in comparative psychology and animal behavior

The Tool Instinct François Osiurak, 2020-04-14 Humans use countless tools and are constantly creating new ones We are so prone to materiality that the changes we implement in our environment could put our very survival at stake It has therefore become necessary to question the cognitive origins of this materiality The Tool Instinct examines this subject by diametrically setting aside the idea that tool use is limited to manual activity It proposes an original perspective that surpasses a great number of false beliefs regarding the relationship between humans and tools The author argues that the human tendency to create and use tools relies on our ability one that may be unique to our species to generate our own physical problems thereby resulting in a reasoning that is directed towards our physical world
