HW5-Practice: Problem 5

[Previous](#)[Problem List](#)[Next](#)

(1 point) In 2013, the Pew Research Foundation reported that "45% of U.S. adults report that they live with one or more chronic conditions". However, this value was based on a sample, so it may not be a perfect estimate for the population parameter of interest on its own. The study reported a standard error of about 1.6%, and a normal model may reasonably be used in this setting.

1. Create a 95% confidence interval for the proportion of U.S. adults who live with one or more chronic conditions. Round to three decimal places.

% to %

2. Identify each of the following statements as true or false. Provide an explanation to justify each of your answers.

False ☐ a. We can say with certainty that the confidence interval from part 1 contains the true percentage of U.S. adults who suffer from a chronic illness.

True ☐ b. If we repeated this study 1,000 times and constructed a 95% confidence interval for each study, then approximately 950 of those confidence intervals would contain the true fraction of U.S. adults who suffer from chronic illnesses.

False ☐ c. The poll provides statistically significant evidence (at the $\alpha = 0.05$ level) that the percentage of U.S. adults who suffer from chronic illnesses is below 50%. We can say with certainty that the confidence interval from part 1 contains the true percentage of U.S. adults who suffer from a chronic illness.

False ☐ d. Since the standard error is 1.6%, only 1.6% of people in the study communicated uncertainty about their answer.
