Georgiou,Georgios P. Danezis,2017-02-27 The determination of food authenticity is a vital component of quality control Its importance has been highlighted in recent years by high profile cases in the global supply chain such as the European horsemeat scandal and the Chinese melamine scandal which led to six fatalities and the hospitalisation of thousands of infants As well as being a safety concern authenticity is also a quality criterion for food and food ingredients Consumers and retailers demand that the products they purchase and sell are what they purport to be This book covers the most advanced techniques used for the authentication of a vast number of products around the world The reader will be informed about the latest pertinent analytical techniques Chapters focus on the novel techniques markers that have emerged in recent years An introductory section presents the concepts of food authentication while the second section examines in detail the analytical techniques for the detection of fraud relating to geographical botanical species and processing origin and production methods of food materials and ingredients Finally the third section looks at consumer attitudes towards food authenticity the application of bioinformatics to this field and the Editor s conclusions and future outlook Beyond being a reference to researchers working in food authentication it will serve as an essential source to analytical scientists interested in the field and food scientists to appreciate analytical approaches This book will be a companion to under and postgraduate students in their wander in food authentication and aims to be useful to researchers in universities and research institutions **Advances in Chemical Analysis Procedures (Part II)** Marcello Locatelli,Victoria Samanidou,2021-01-20 In the field of Analytical Chemistry and in particular whenever a qualitative quantitative analysis is required until a few years ago reference was made exclusively to instrumental methods more or less hyphenated which once validated were able to provide the answers to the questions present even if only in a limited way to analytical targets Nowadays the landscape has become considerably complicated natural adulterants assessment of geographical origin sophistication need for non destructive analysis search for often unknown compounds and new procedures for processing data have greatly increased the potential of analyses that are conducted even routinely in the laboratory In this scenario chemometrics is master able to manage and process a huge amount of information based both on data relating only to the analytes of interest but also by applying general procedures to process raw untargeted analysis data It is within this strand of analysis that many of the works reported in this Special Issue fall In the succession of works in this printed version the criterion that guided us was to highlight how starting exclusively from chromatographic techniques HPLC and GC with conventional detectors and moving to exclusively spectroscopic techniques MS FT IR and Raman it is possible arrive at extremely powerful coupled techniques and procedures HPLC and FT IR able to meet research needs Finally at the

end of the printed volume there are two reviews that surveying the state of the art regarding the assessment of authenticity through qualitative analyses and the application of chemometrics in the pharmaceutical field in the study of forced drug degradation products From the succession of works and above all from the various application fields it can immediately be seen how the application of chemometrics and its procedures to both raw and processed data is a powerful means of obtaining robust reproducible and predictive information In this manner it is possible to create models able to explain and respond to the original problem in a much more detailed way and Honghe through Fourier transform mid infrared FT MIR spectra combined with partial least squares discriminant analysis PLS DA random forest RF and hierarchical cluster analysis HCA methods Melucci and collaborators apply chemometric approaches to non destructive analysis of ATR FT IR for the determination of biosilica content This value was directly evaluated in sediment samples without any chemical alteration using attenuated total reflection Fourier transform infrared ATR FTIR spectroscopy and the quantification was performed by combining the multivariate standard addition method MSAM with the net analyte signal NAS procedure to solve the strong matrix effect of sediment samples Still in the food and food supplements field Anguebes Franseschi and collaborators report an article where 10 chemometric models based on Raman spectroscopy were applied to predict the physicochemical properties of honey produced in the state of Campeche Mexico Organic Trace Analysis Reinhard Nießner, Andreas Schäffer, 2017-08-07 Organic Trace Analysis presents the basics of trace analysis from sample preparation to the measurement Students are introduced to statistical evaluation quality control technologies sampling and preparation of organic traces as well as to enrichment and separation of samples Spectroscopic techniques as chromatography capillary electrophoresis mass spectrometry and receptor based bioanalysis are presented in detail **Encyclopedia of Agriculture and Food Systems** Neal K.
