Metabolic pathways

Q10 Is cellular metabolism a source of thermodynamic work? What about the generation of heat? How do these two factors relate to the second law of thermodynamics? (10 marks)

A10 Metabolic reactions are included in thermodynamics. This states that the spontaneous direction of a thermodynamic process is determined by the change in Gibbs free energy. Thermodynamically spontaneous reactions:

Exo: release free energy (negative ΔG)

Endo: consume free energy (positive ΔG)

Free energy is the ability to do work

- (a) Exothermic reactions serve as thermodynamic work when the products are at a lower free energy than the reactants.

Example: combustion of hydrogen

hydrogen + oxygen → water + heat

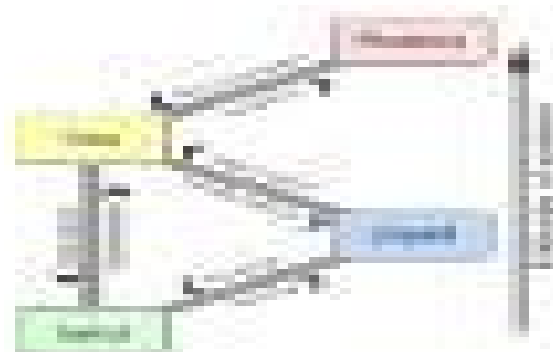

- (b) Exothermic reactions release heat as product and spontaneously convert products to reactants.

Example: thermal decomposition of hydrogen peroxide

- (c) Heat always is a thermodynamic thermodynamic work
