Chemistry of Advanced Materials Leonard V. Interrante, 1996-10 Concentrating on the role of chemistry in the preparation and processing of advanced materials this volume introduces topics and places them in proper context in terms of their relevance to the science and technology of the past present and future

Chemistry of Advanced Materials Leonard V. Interrante, Mark J. Hampden-Smith, 1998 Chemistry has a vital role to play in materials processing and in the development of new materials that can meet the changing needs of today's technology This volume addresses both the basic underlying principles and the technological relevance of major topics in advanced materials chemistry including Electron transfer salt based conductors superconductors and magnets Advanced polymeric materials functional electroactive polymers Polymers in electronics Chemical vapor deposition An introduction to the nonlinear optical properties of organic materials Nanoparticles and nanostructural materials Nanoporous materials Molecular precursor routes to inorganic solids Layered transition metal oxides and chalcogenides Biomaterials Bringing together a battery of important information in a single source this stand alone reference is an invaluable companion for aspiring and practicing organic inorganic solid state and surface chemists as well as polymer and materials scientists

Precursor Chemistry of Advanced Materials Roland A. Fischer, 2005-09-29 Material synthesis by the transformation of organometallic compounds precursors by vapor deposition techniques such as chemical vapor deposition CVD and atomic layer deposition ALD has been in the forefront of modern day research and development of new materials There exists a need for new routes for designing and synthesizing new precursors as well as the application of established molecular precursors to derive tuneable materials for technological demands With regard to the precursor chemistry a most detailed understanding of the mechanistic complexity of materials formation from molecular precursors is very important for further development of new processes and advanced materials To emphasize and stimulate research in these areas this volume comprises a selection of case studies covering various key aspects of the interplay of precursor chemistry with the process conditions of materials formation particularly looking at the similarities and differences of CVD ALD and nanoparticle synthesis e g colloid chemistry involving tailored molecular precursors
