

Scientific Investigation Study Guide

3.1 The student will demonstrate an understanding of scientific reasoning, logic, and the nature of science by planning and conducting investigations.

Scientists follow a process in order to gain knowledge. This process is called the Scientific Method!

The Scientific Method has 7 steps:

1. **Question**- ask a question based on something that you have observed.
2. **Research**-learn more about your topic.
3. **Hypothesis**-based on your research, predict a possible answer to your question. (If...Then... Statement)
4. **Make a Plan**-design your experiment!
5. **Experiment**-conduct your experiment!
6. **Collect and Record Data**- Record your experiment results in an organized way.
7. **Draw Conclusions and Communicate**-Analyze your results and share them with your peers. Communicate your ideas using charts, graphs, and tables!

Scientists:

- Make and communicate careful observations.
- Repeat their observations for accuracy.
- Classify objects into two or more sets and subsets based on similar characteristics.
- Put information in order.
- Measure length, time, mass, volume and temperature.
- Design and build models to show results.

Key Vocabulary!

Observations are made using the 5 senses. What are the 5 senses?

Prediction- a statement of what you think will happen in the future.

Hypothesis- a statement of what you think will happen if certain events occur. An "If...Then" statement.

Data- information collected in an experiment. Data can be gathered, charted, and graphed.
