Matlab Will Chavez, 2019-10-02 Many features of this book are designed to emphasize the proper way to write reliable MATLAB programs These features should serve a student well when he or she is first learning MATLAB and they should also be useful to the practitioner on the job They include

- i Emphasis on Top Down Design Methodology The book introduces a top down design methodology in Chapter 3 and uses it consistently throughout the rest of the book This methodology encourages a student to think about the proper design of a program before beginning to code It emphasizes the importance of clearly defining the problem to be solved and the required inputs and outputs before any other work is begun Once the problem has been properly defined it teaches the student to employ stepwise refinement to break the task down into successively smaller sub tasks and to implement the subtasks as separate subroutines or functions Finally it teaches the importance of testing at all stages of the process both unit testing of the component routines and exhaustive testing of the final product The formal design process taught by the book may be summarized as follows
- ii Clearly state the problem that you are trying to solve
- iii Define the inputs required by the program and the outputs to be produced by the program
- iv Describe the algorithm that you intend to implement in the program This step involves top down design and stepwise decomposition using pseudocode or flow charts
