

Do not apply side loads on the hook and on the shackle. Check the condition of the hook, of the shackle and of any lifting chains. Replace the parts if any sign of unusual wear is indicated.

## Rated Load for Backhoe Lifting and Object Handling

The rated load for the backhoe lifting applications is defined by "EN 474-4". Rated operating loads are given according to this standard. Additional rated operating loads are given with "SAE J31 March 1986" and "ISO 10567 1992" as a reference.

The rated load for the backhoe lifting applications is defined by "EN 474-4 Feb. 1996". The rated load for the backhoe lifting applications is defined as the lesser value of the following conditions at the specified lift point radius:

- 75% of the static tipping load
- the hydraulic lifting load
- 80% of the hydraulic holding load

The rated load for the backhoe lifting applications is defined by "SAE J31 March 1986" and "ISO 10567 1992" as a reference. The rated operating load for backhoe lifting applications is defined as the lesser value of the following conditions at the specified lift point radius:

- 75% of the static tipping load
- 87% of the hydraulic lifting load

Lift Point Radius (A)

The lift point radius is defined as the distance from the swing pivot center to the bucket hinge pin for the backhoe. The bucket hinge pin for the backhoe is level with the lower boom hinge pin at each lift point radius (A). Rated loads include the weight of the attachment. The rated operating loads are for the standard machine configuration.

**Note:** In the European countries, regulations require a load sensing indicator and a boom lowering control device if more than 1000 kg (2204.6 lb) is lifted with the backhoe during object handling applications. Even though the hydraulic lift capacity exceeds 1000 kg (2204.6 lb) for the object handling application, the rated object handling capacity for the backhoe is 1000 kg (2204.6 lb) in European countries due to these regulations.

## 420D Loader Buckets

The following tables provide the rated operating loads for the standard machine that is equipped with the given bucket. The corresponding dump clearance is given for each bucket at maximum lift height and at the full dump angle. The reach is given for each bucket at maximum lift height and at the full dump angle. Clearance is measured from the ground to the bucket edge in order to dump the load. The reach is measured from the front grill to the bucket edge.
