Gorlewski, 2011-07-01 Students in public schools serving poor and working class students are inundated by the effects of high stakes examinations Teachers are demoralized and students suffer substandard curricular and pedagogical experiences These effects are articulated by students and teachers in the high school that provided the setting for the critical ethnography on which this text is based Teachers resent being judged on the basis of students performance on standardized assessments They are deprofessionalized as their roles are oriented toward working class norms Students feel alienated by content that is meaningless and test based pedagogies that are disempowering While these findings are disturbing critical theory provides a foundation for seeking hope By incorporating inquiry and dialogue this theoretical framework opens a space where resistance can be revealed and examined In this case the study exposed glimmers of resistance spaces in the structure of schooling where students and teachers critique the system and suggest ways of subverting the negative effects of the neoliberal reforms through dialogic empowering culturally responsive pedagogies Collective resistance achieved through dialogic pedagogies that build on understandings of resistance and power can cultivate theoretical and material spaces where a cycle of praxis can enhance possibilities for social justice To that end the conclusion is devoted to the implementation of critical dialogic approaches to literacies approaches intended to interrupt the hegemonic influences that perpetuate social reproduction by capitalizing on the potential for solidarity and collective agency among the students and teachers who populate and educate the working classes This book would interest teacher educators teachers and school administrators The Journal of Education , 1888 **Creating Wicked Students** Paul Hanstedt, 2023-07-03 In Creating Wicked Students Paul Hanstedt argues that courses can and should be designed to present students with what are known as wicked problems because the skills of dealing with such knotty problems are what will best prepare them for life after college As the author puts it this book begins with the assumption that what we all want for our students is that they be capable of changing the world When a student leaves college we want them to enter the world not as drones participating mindlessly in activities to which they've been appointed but as thinking deliberative beings who add something to society There's a lot of talk in education these days about wicked problems problems that defy traditional expectations or knowledge problems that evolve over time Zika ISIS political discourse in the era of social media To prepare students for such wicked problems they

need to have wicked competencies the ability to respond easily and on the fly to complex challenges Unfortunately a traditional education that focuses on content and skills often fails to achieve this sense of wickedness Students memorize for the test prepare for the paper practice the various algorithms over and over again but when the parameters or dynamics of the test or the paper or the equation change students are often at a loss for how to adjust This is a course design book centered on the idea that the goal in the college classroom in all classrooms all the time is to develop students who are not just loaded with content but capable of using that content in thoughtful deliberate ways to make the world a better place Achieving this goal requires a top to bottom reconsideration of courses including student learning goals text selection and course structure day to day pedagogies and assignment and project design Creating Wicked Students takes readers through each step of the process providing multiple examples at each stage while always encouraging instructors to consider concepts and exercises in light of their own courses and students
