One of the most significant challenges in the development of embedded and cyber physical systems is the gap between the disciplines of software and control engineering In a marketplace where rapid innovation is essential engineers from both disciplines need to be able to explore system designs collaboratively allocating responsibilities to software and physical elements and analyzing trade offs between them To this end this book presents a framework that allows the very different kinds of design models discrete event DE models of software and continuous time CT models of the physical environment to be analyzed and simulated jointly based on common scenarios The individual chapters provide introductions to both sides of this co simulation technology and give a step by step guide to the methodology for designing and analyzing co models They are grouped into three parts Part I introduces the technical basis for collaborative modeling and simulation with the Crescendo technology Part II continues with different methodological guidelines for creating co models and analyzing them in different ways using case studies Part III then delves into more advanced topics and looks into the potential future of this technology in the area of cyber physical systems Finally various appendices provide summaries of the VDM and 20 sim technologies a number of valuable design patterns applicable for co models and an acronym list along with indices and references to other literature By combining descriptions of the underlying theory with records of real engineers experience

in using the framework on a series of case studies the book appeals to scientists and practitioners alike It is complemented by tools examples videos and other material on www.crescendotool.org Scientists researchers and graduate students working in embedded and cyber physical systems will learn the semantic foundations for collaborative modeling and simulation as well as the current capabilities and limitations of methods and tools in this field Practitioners will be able to develop an appreciation of the capabilities of the co modeling techniques to assess the benefits of more collaborative approaches to modeling and simulation and will benefit from the included guidelines and modeling patterns
