*Control of Dead-time Processes* Julio E. Normey-Rico, 2007-06-14 This text introduces the fundamental techniques for controlling dead time processes from simple monovariable to complex multivariable cases Dead time process control problems are studied using classical proportional integral differential PID control for the simpler examples and dead time compensator DTC and model predictive control MPC methods for progressively more complex ones Downloadable MATLAB code makes the examples and ideas more convenient and simpler

**Control of Integral Processes with Dead Time** Antonio Visioli, Qingchang Zhong, 2010-11-18 Control of Integral Processes with Dead Time provides a unified and coherent review of the various approaches devised for the control of integral processes addressing the problem from different standpoints In particular the book treats the following topics How to tune a PID controller and assess its performance How to design a two degree of freedom control scheme in order to deal with both the set point following and load disturbance rejection tasks How to modify the basic Smith predictor control scheme in order to cope with the presence of an integrator in the process and how to address the presence of large process dead times The methods are presented sequentially highlighting the evolution of their rationale and implementation and thus clearly characterising them from both academic and industrial perspectives
