The Physics and Chemistry of Carbides, Nitrides and Borides R. Freer,2012-12-06 Carbides nitrides and borides are families of related refractory materials Traditionally they have been employed in applications associated with engineering ceramics where either high temperature strength or stability is of primary importance In recent years there has been a growing awareness of the interesting electrical thermal and optical properties exhibited by these materials and the fact that many can be prepared as monolithic ceramics single crystals and thin films In practical terms carbides nitrides and borides offer the prospect of a new generation of semiconductor materials for example which can function at very high temperatures in severe environmental conditions However as yet we have only a limited understanding of the detailed physics and chemistry of the materials and how the preparation techniques influence the properties Under the auspices of the NATO Science Committee an Advanced Research Workshop ARW was held on the Physics and Chemistry of Carbides Nitrides and Borides University of Manchester 18 22 September 1989 in order to assess progress to date and identify the most promising themes and materials for future research An international group of 38 scientists considered developments in 5 main areas The preparation of powders monolithic ceramics single crystals and thin films Phase transformations microstructure defect structure and mass transport Materials stability Theoretical studies Electrical thermal and optical properties of bulk materials and thin films Nuclear Science Abstracts ,1975-12

Recent Advances in Engineering Science Severino L. Koh,Charles G. Speziale,2012-12-06 The 25th Anniversary Meeting of the Society of Engineering Science was held as a joint conference with the Applied Mechanics Division of the American Society of Mechanical Engineers at the University of California Berkeley from June 20 22 1988 With the encouragement and support of the SES we decided to organize a symposium in honor of A C Eringen the founding president of the Society of Engineering Science who provided pioneering leadership during the critical first decade of the Society's existence We felt that there was no better way to do this than with a Symposium on Engineering Science the field that A C Eringen has devoted his life to Professor Eringen had the foresight even in his own early work to see the need for an intimate amalgamation of engineering and science transcending the bounds of the traditional engineering disciplines to address unsolved problems of technological importance Sustained by the belief that there was the need to provide a forum

for researchers who had embraced this broader interdisciplinary approach Professor Eringen founded the Society of Engineering Science and the International Journal of Engineering Science in 1963 Since that time he has made countless contributions to the advancement of engineering science through his research educational and organizational activities The participants in the Symposium were former students and colleagues of Professor Eringen who have been strongly influenced by his professional activities and research in engineering science *Commerce, Justice, Science, and Related Agencies Appropriations for Fiscal Year 2012* United States.
