Deixis In Narrative A Cognitive Science Perspective:

Deixis in Narrative Judith F. Duchan, Gail A. Bruder, Lynne E. Hewitt, 2012-12-06 This volume describes the theoretical and empirical results of a seven year collaborative effort of cognitive scientists to develop a computational model for narrative understanding. Disciplines represented include artificial intelligence, cognitive psychology, communicative disorders, education, English, geography, linguistics, and philosophy. The book argues for an organized representational system, a Deictic Center (DC), which is constructed by readers from language in a text combined with their world knowledge. As readers approach a new text, they need to gather and maintain information about who the participants are and where and when the events take place. This information plays a central role in understanding the narrative. The editors claim that readers maintain this information without explicit textual reminders by including it in their mental model of the story world. Because of the centrality of the temporal, spatial, and character information in narratives, they developed their notion of a DC as a crucial part of the reader's mental model of the narrative. The events that carry the temporal and spatial core of the narrative are linguistically and conceptually constrained according to certain principles that can be relatively well defined. A narrative obviously unfolds one word or one sentence at a time. This volume suggests that cognitively a narrative usually unfolds one place and time at a time. This spatio-temporal location functions as part of the DC of the narrative. It is the here and now of the reader's mind's eye in the world of the story. Organized into seven parts, this book describes the goal of the cognitive science project resulting in this volume, the methodological approaches taken, and the history of the collaborative effort. It provides a historical and theoretical background underlying the DC theory, including discussions of deixis in language and the nature of fiction. It goes on to outline the computational framework and how it is used to represent deixis in narrative and details the linguistic devices implicated in the DC theory. Other subjects covered include crosslinguistic indicators of subjectivity, psychological investigations of the use of deixis by children and adults as they process narratives, conversation direction, giving implications for emerging literacy, and a narrator's experience in writing a short story. **Cognitive**

Stylistics Elena Semino, Jonathan Culpeper, 2002-11-05 This book represents the state of the art in cognitive stylistics, a rapidly expanding field at the interface between linguistics, literary studies, and cognitive science. The twelve chapters combine linguistic analysis with insights from cognitive psychology and cognitive linguistics in order to arrive at innovative accounts of a range of literary and textual phenomena. The chapters cover a variety of literary texts, periods, and genres, including poetry, fictional and non-fictional narratives, and plays. Some of the chapters provide new approaches to phenomena that have a long tradition in literary and linguistic studies, such as humour, characterisation, figurative language, and metre; others focus on phenomena that have not yet received adequate attention, such as split selves, phenomena of mind, style, and spatial language. This book is relevant to students and scholars in a wide range of areas within linguistics, literary studies, and cognitive science. **Narratology in the Age of Cross-Disciplinary Narrative Research** Sandra Heinen, Roy

Sommer,2009-09-04 Narrative Research once the domain of structuralist literary theory has over the last 15 years developed into an international and interdisciplinary field It is now commonly agreed that storytelling functions as a fundamental cognitive tool for sense making and meaning production and that human beings structure and communicate lived experience through oral written and visual stories Entitled Narratology in the Age of Cross Disciplinary Narrative Research this volume collects fifteen essays which look at narrative and narrativity from various perspectives including literary studies and hermeneutics cognitive theory and creativity research metaphor studies film theory and intermediality as well as memory studies musicology theology and psychology The topics touch on a wide range of issues such as the current state of narratology and its potential for development narrativity in visual and auditive art forms the cultural functions of narrative and the role of narrative concepts across the disciplines The volume introduces interested newcomers to the ongoing debate reflecting the diversity of research questions and methodological approaches involved It takes a critical yet cautiously optimistic stance with regard to the potential for interdisciplinary collaboration between narrative researchers and invites experienced readers from any discipline interested in narrative to join this important debate which promotes the exchange of ideas concepts and methods between the humanities and the social sciences [The Handbook of Narrative Analysis](#) Anna De Fina,Alexandra Georgakopoulou,2019-02-12 Featuring contributions from leading scholars in the field The Handbook of Narrative Analysis is the first comprehensive collection of sociolinguistic scholarship on narrative analysis to be published Organized thematically to provide an accessible guide for how to engage with narrative without prescribing a rigid analytic framework Represents established modes of narrative analysis juxtaposed with innovative new methods for conducting narrative research Includes coverage of the latest advances in narrative analysis from work on social media to small stories research Introduces and exemplifies a practice based approach to narrative analysis that separates narrative from text so as to broaden the field beyond the printed page *Narrative Theory, Literature, and New Media* Mari Hatavara,Matti Hyvärinen,Maria Mäkelä,Frans Mäyrä,2015-06-19 Offering an interdisciplinary approach to narrative this book investigates storyworlds and minds in narratives across media from literature to digital games and reality TV from online sadomasochism to oral history databases and from horror to hallucinations It addresses two core questions of contemporary narrative theory inspired by recent cognitive scientific developments what kind of a construction is a storyworld and what kind of mental functioning can be embedded in it Minds and worlds become essential facets of making sense and interpreting narratives as the book asks how story internal minds relate to the mind external to the storyworld that is the mind processing the story With essays from social scientists literary scholars linguists and scholars from interactive media studies answering these topical questions the collection brings diverse disciplines into dialogue providing new openings for genuinely transdisciplinary narrative theory The wide ranging selection of materials analyzed in the book promotes knowledge on the latest forms of cultural and social meaning making through narrative necessary for navigating the contemporary mediatized
