

SAFETY PRECAUTIONS

When working on the machine with the tailgate open, always have the PTO disengaged, the tractor engine shut off, and the tailgate cylinder safety stops in the installed position on both sides.

Before raising the tailgate, make sure the baler is securely fastened to the drawbar. The baler will have a negative tongue weight when the tailgate is raised. This can cause the baler to tip to the rear, causing personal injury or machine damage.

Always put blocks in front of and behind the wheels of the tractor and baler before working on or under the baler.

Never check the belts while the machine is running.

Do not exceed tire inflation pressures as specified. See the Specifications section.

Tire explosion and/or serious injury can result from over inflation. See the Specifications section.

When tire service is necessary, have a qualified tire mechanic service the tire.

Do not weld to the wheel or rim when a tire is installed. Welding will cause an explosive air/gas mixture that will ignite with high temperatures. This can happen to tires that are inflated or deflated. Removing air or breaking the bead is NOT enough. The tire must be completely removed from the rim prior to welding.

Always install safety chain between the baler and tractor drawbar.

- Use a chain with a strength rating equal to or more than the gross weight of the towed machine.
- Supply only enough slack in the chain to permit turning.
- Do not use safety chain as a tow chain for towing.

Hydraulic fluid under pressure can have enough force to penetrate the skin, causing injury. Before disconnecting the hydraulic lines, stop the tractor engine and relieve the pressure from the hydraulic lines by moving the control levers. Before applying pressure to the system, make sure that all the connections are tight and that the hoses and lines are not damaged.

Hydraulic fluid escaping from a very small hole can be almost invisible. Always use a piece of cardboard or wood for locating hydraulic leaks. Never use the hands, as escaping fluid under force can penetrate skin. If not treated immediately, serious infection or reaction can develop. If injured by escaping fluid, see a doctor at once.

Stay clear of rotating components. Keep all drive line guards in position at all times. Make sure rotating guards turn freely.

Always remove tractor ignition key when parking.

Always remain seated while operating the machine.

Always keep hands, feet and clothing away from moving parts.

Never attempt to pull crop or any other article from the pickup assembly while the machine is running.

Stay at least 12 FT (3.7 m) away from the tailgate and ejector at all times. The tailgate and ejector operate faster than you can move away.

Always make sure the area around the tailgate and the ejector is clear for at least 12 FT (3.7 m) before opening the tailgate and unloading the bale.

Never carry riders.

Never start the tractor with PTO engaged or baler control power switch in ON position.

Always operate baler with baler control power switch in ON position.

Make certain tractor is in safe operating condition with adequate braking capabilities, especially when operating on uneven terrain.

Do not road the baler with a bale in the bale chamber.

Limit the roading speed of a unloaded baler to 20 mph (32 km/h).

Always have slow moving vehicle (SMV) emblem clean and visible and use adequate lights or safety warnings when transporting machine on public roads. Check with your local law enforcement agencies for specific requirements.

Do not pull crop or any other article from the pickup assembly while the PTO is engaged or the machine is running.

Do not remove twine from the pickup area or bale chamber while the PTO is engaged or the machine is running.
