

Paragraphs 13-17

against the cap screw heads. On model 880, 990 or 4600, install drop arm as shown in Fig. 15.

Insert spherical seat (7—Fig. 8) with flat face down, then install lower race (8) with round face in spherical seat. With bearing race positioned just below groove in steering column, drop in the ten loose bearing balls (8). Install new "O" ring in groove on upper race (8), then thread upper race onto steering shaft so as to remove all play from bearing, yet allow shaft

to turn freely. Install lock tab washer (2) and lock nut (1), then bend tabs of washer against lock nut and upper bearing race.

DRAG LINK

All Models

12. Drag link ends are of the non-adjustable automotive type and must be renewed as a complete unit.

Adjust length of drag link if steering gear internal stop contacts before spindle contacts stop on axle extension.

POWER STEERING

The power steering system is of the power assist type and utilizes the standard manual steering gear which allows the operator to steer tractor manually should loss of power occur.

FLUID AND BLEEDING

All Models

14. To bleed the system, turn front wheels to right against stop. Fill reservoir to "full" mark on dipstick with a good quality SAE 10W oil or with Type "A" automatic transmission fluid. Start engine and run at a fast idle; then, turn front wheels full left and full right while observing fluid in reservoir. Continue turning wheels from side to side until fluid in reservoir is free of bubbles and excess turbulence, then turn wheels to straight ahead position and refill reservoir to "full" mark on dipstick.

SYSTEM OPERATING PRESSURE

All Models

15. A pressure test of the power steering circuit will disclose whether the pump, relief valve or some other unit in the system is malfunctioning. To check system pressure, proceed as follows:

Connect a pressure test gage and shut-off valve in series with the pump pressure line and be sure the pressure gage is connected in the circuit between the shut-off valve and pump. Open the shut-off valve and bleed the system as in paragraph 14. Operate engine at slow idle speed until fluid is at normal operating temperature. Then, with engine running at fast idle speed, close the shut-off valve and retain in closed position only long enough to observe pressure gage reading which should be as follows:

Tractor Model	Normal Pressure
770-780-3800	600
880-8900	700
990	900
1200	1000

NOTE: Pump may be seriously damaged if valve is left in closed position for more than a few seconds. If gage reading is within 40 psi of normal system pressure with shut-off valve fully closed, pump and relief valve are OK and any trouble is located in the steering cylinder and control valve.

If gage pressure is excessively high, relief valve is probably stuck in closed position or incorrectly installed (turned end for end) in valve bore. If gage pressure is more than 40 psi below normal system pressure, adjustment shims should be added in the model 1200 pump, or a new relief valve assembly should be installed in the roller vane type pump. If gage

Fig. 17—Exploded view of power steering pump and reservoir assembly used on early model 990; refer to Fig. 23 for late model 990. Fluid bypassed by the flow control valve (3) is returned through the reservoir mounting stud (25) striking the check ball (26) off of its seat and is filtered before entering the reservoir. The check valve prevents unfiltered fluid returned from the steering cylinder to enter the pump. Other models with vane type pump are similar except the fluid reservoir is separately mounted and the fluid bypassed by valve (3) returns directly to intake side of pump.

pressure still remains low, pump should be overhauled.

R&R PUMP

Model 990 with Integral Pump and Reservoir

16. Disconnect return line from steering cylinder, remove reservoir filler cap and allow reservoir to drain. Disconnect pressure line from cylinder, unbolt pump adapter plate from engine and remove the pump, reservoir and hoses. Clean outside of pump and remove hoses. Refer to paragraph 18 for disassembly and overhaul procedures.

To reinstall pump, reverse removal procedure, then fill and bleed the system as outlined in paragraph 14. Note that pressure hose is connected to cylinder port containing check valve spring and ball.

Model 1200 and Model 990 with Separate Pump and Reservoir

17. Disconnect return hose at power steering cylinder and remove reservoir filler cap to allow reservoir to drain. Clean outside of pump and connections, then disconnect by-pass line, supply hose and pressure tube from pump. Unbolt and remove pump from engine.

Reinstall pump by reversing removal procedure, and fill and bleed the system as outlined in paragraph 14.
