Toxic Sexual Politics Melina Packer, 2025-01-28 A bold exposé of how the very foundation of toxicology has been contaminated by sexist and racist ideologies The first critical understanding of the field of toxicology from a feminist and antiracist perspective Toxic Sexual Politics asserts that the science of toxicants must be held accountable for the uneven distribution of toxic pollution along racial and sexual lines Drawing upon in depth interviews and extensive ethnographic and archival research including participant observations in toxicology classrooms conferences and laboratories Melina Packer urges environmental health advocates to place toxicant science within its masculinist militarist and eugenicist history Toxic Sexual Politics shows how the founding fathers of U S toxicology were ideologically aligned with the chemical industry inventing a science that could make chemicals safe as opposed to one that could adequately protect planetary health from toxicants hazards While many toxicologists today are critical of the chemical industry they continue to rely on the highly limited tools of toxicology as accurate measures of toxicity as do government regulators the courts and environmental advocates Unlike most critiques of the chemical industry and narratives of environmental health movements Toxic Sexual Politics refuses to take the science at face value By focusing on the sexist racist and ableist biases reinforced by toxicology Packer powerfully argues that this scientific discipline reproduces the very same white supremacist and heterosexist logics that generated environmental injustices in the first place The field of toxicology can explicitly confront chemical corporate

power by building from queer feminist anti ableist and antiracist movements for environmental and reproductive justice

Research Ethics for Environmental Health Friedo Zölzer, Gaston Meskens, 2021-12-19 Research Ethics for Environmental Health explores the ethical basis of environmental health research and related aspects of risk assessment and control Environmental health encompasses the assessment and control of those environmental factors that can potentially affect human health such as radiation toxic chemicals and other hazardous agents It is often assumed that the assessment part is just a matter of scientific research and that control is a matter of implementing standards that unambiguously follow from that research But it is less commonly understood that environmental health also requires addressing questions of an ethical nature Coming from multiple disciplines and nine different countries the contributors to this book critically examine a diverse range of ethical concerns in modern environmental health research This book will be of great interest to scholars and practitioners of environmental health as well as researchers in applied ethics environmental ethics medical ethics bioethics and those concerned with chemical and radiation protection
