Cryptic Female Choice In Arthropods Patterns Mechanisms And Prospects:

Cryptic Female Choice in Arthropods Alfredo V. Peretti, Anita Aisenberg, 2015-05-25 This timely book revisits cryptic female choice in arthropods gathering detailed contributions from around the world to address key behavioral ecological and evolutionary questions The reader will find a critical summary of major breakthroughs in taxon oriented chapters that offer many new perspectives and cases to explore and in many cases unpublished data Many groups of arthropods such as spiders harvestmen flies moths crickets earwigs beetles eusocial insects shrimp and crabs are discussed Sexual selection is currently the focus of numerous and controversial theoretical and experimental studies Selection in mating and post mating patterns can be shaped by several different mechanisms including sperm competition extreme sexual conflict and cryptic female choice Discrimination among males during or after copulation is called cryptic female choice because it occurs after intromission the event that was formerly used as the definitive criterion of male reproductive success and is therefore usually difficult to detect and confirm Because it sequentially follows intra and intersexual interactions that occur before copulation cryptic female choice has the power to alter or negate precopulatory sexual selection However though female roles in biasing male paternity after copulation have been proposed for a number of species distributed in many animal groups cryptic female choice continues to be often underestimated Furthermore in recent years the concept of sexual conflict has been frequently misused linking sexual selection by female choice irrevocably and exclusively with sexually antagonistic co evolution without exploring other alternatives The book offers an essential source of information on how two fields selective cooperation and individual sex interests work together in the context of cryptic female choice in nature using arthropods as model organisms It is bound to spark valuable discussions among scientists working in evolutionary biology across the world motivating new generations to unveil the astonishing secrets of sexual biology throughout the animal kingdom **Biotremology: Studying**

Vibrational Behavior Peggy S. M. Hill, Reinhard Lakes-Harlan, Valerio Mazzoni, Peter M. Narins, Meta Virant-Doberlet, Andreas Wessel, 2019-11-29 This volume is a self contained companion piece to Studying Vibrational Communication published in 2014 within the same series The field has expanded considerably since then and has even acquired a name of its own biotremology In this context the book reports on new concepts in this fascinating discipline and features chapters on state of the art methods for studying behavior tied to substrate borne vibrations as well as an entire section on applied biotremology Also included are a historical contribution by pioneers in the field and several chapters reviewing the advances that have been made regarding specific animal taxa Other new topics covered are vibrational communication in vertebrates multimodal communication and biotremology in the classroom as well as in art and music Given its scope the book will appeal to all those interested in communication and vibrational behavior but also to those seeking to learn about an ancient mode of communication **The Female Turn** Malin Ah-King, 2023-01-04 This book traces the history of how evolutionary biology transformed its understanding of females from being coy reserved and sexually

passive to having active sexual strategies and often mating with multiple males Why did it take so long to discover female active sexual strategies What prevented some researchers from engaging in sexually active females and what prompted others to develop this new knowledge The Female Turn provides a global overview of shifting perceptions about females in sexual selection research on a wide range of animals from invertebrates to primates Evolutionary biologist and feminist science scholar Malin Ah King explores this history from a unique interdisciplinary vantage point Based on extensive knowledge of the scientific literature on sexual selection and in depth interviews with leading researchers pioneers and feminist scientists in the field her analysis engages with key theoretical approaches in gender studies of science Analyzing the researchers scientific interests theoretical frameworks specific study animals technological innovations methodologies and sometimes feminist insights reveals how these have shaped conclusions drawn about sex Thereby The Female Turn shows how certain researchers gained knowledge about active females whereas others missed ignored or delayed it that is how ignorance was produced

Behaviour and Ecology of Spiders Carmen Viera, Marcelo O. Gonzaga, 2017-11-02 Within the last few decades arachnology in the Neotropical region has experienced a great development filling the knowledge gap in one of the most diverse regions of the world Nevertheless large geographical areas remain poorly sampled especially within the Amazon and new genera and species have been continuously discovered even in urban areas In congruence with the recent improvements in research several aspects of the ecology behaviour and natural history of spiders such as interactions with other predators and parasitoids social interactions dispersal patterns habitat requirements mating behaviors among others are being carefully investigated These recent contributions incorporate substantial information on the preexisting knowledge on these subjects every year Our main objective with this book is to present a summary on these new researches and on the currently knowledge on the main subjects involved in the general theme emphasizing the contribution of the rich fauna of the Neotropical region to the research of behaviour and ecology of the spiders
