# Cryptography Final Exam Study Guide- Questions & Answers (RATED A)

What security services does cryptography provide? What security services does cryptography not provide? - ANSWER - Provides:

Confidentiality  
Integrity  
Authentication  
Non Repudiation

Does Not Provide:

1. Access Control

Data confidentiality: How to achieve data confidentiality? How to protect the confidentiality of bulk data (say 1 Giga bytes)? - ANSWER - Encryption

What does Kerckhoffs' assumption/principle tell us? Why is it important? - ANSWER - "a cryptosystem should be secure even if everything about the system, except the key, is public knowledge."

What is brute-force attack? What do you need to know in order to mount brute- force attacks? - ANSWER - Exhaustive effort to gain access to a system, trying all possibilities. On average, half of all possible keys must be tried to be successful. Some degree of knowledge about the expected plaintext is needed, and some way of distinguishing plaintext from garble is also needed.

CCA and CCA2: What are the differences between chosen-ciphertext attacks (CCA) and adaptive chosen-ciphertext attacks (also called CCA2)? - ANSWER - A chosen-ciphertext attack (CCA) is an attack model for cryptanalysis where the cryptanalyst can gather information by obtaining the decryptions of chosen ciphertexts. From these pieces of information the adversary can attempt to recover the hidden secret key used for decryption.

Adaptive chosen-ciphertext attack

How does one-time pad (OTP) work? How secure is it? How practical is it? - ANSWER - A random key as long as the message is created and used once to encrypt/decrypt. OTP is presumed to be unbreakable, but is not practical. Large quantities of random keys must be created. Key distribution and protection is a problem.

What is information-theoretic security? What is computational security? What are their differences? - ANSWER - Information-theoretic security means that any algorithm (even unbounded) has a negligible probability of breaking the security property (in the security parameter). This is the same as unconditional security.
