Student Exploration: Refraction

Learning Goals: Explain the relationship between the angle of incidence, frequency, and wavelength of light. Predict the direction of refraction for light passing from one medium to another.

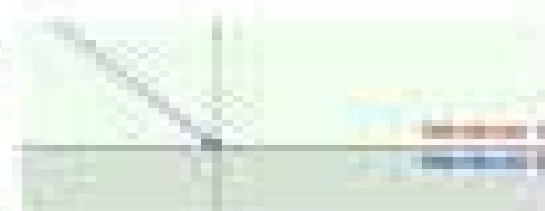

Prerequisite Knowledge: Students should understand the concept of light as a wave and the relationship between frequency and wavelength.

1. What would happen if light passed from one medium to another? (e.g., from air to water)?

2. How does the speed of light change when it passes from one medium to another? (e.g., from air to water)?

Student Exploration:

Light can travel through many different media. In **vacuum**, the speed of light is constant and is approximately 3×10^8 m/s. When light travels through different media, its speed changes. This change in speed causes light to bend, a phenomenon known as **refraction**.

Student Exploration: What happens when light travels from one medium to another?

1. Light travels from medium 1 (air) to medium 2 (water). What happens to the light ray?

a. Does the speed of the light ray change?

b. Does the wavelength of the light ray change?

Student Exploration: What happens when light travels from one medium to another?

2. Light travels from medium 1 (air) to medium 2 (water). What happens to the light ray? (e.g., does it bend, and if so, in which direction?)
