Weaves in examples of various numerical methods and validates solutions to each with Python and Simulink graphical programming. Features appendices on how to use Python and Simulink. Aimed at advanced undergraduate and graduate chemical engineering students as well as practicing chemical engineers, this textbook offers a guide to the use of two of the most widely used programs in the discipline. The textbook features numerous video lectures of applications and a solutions manual for qualifying instructors. *Efficient Computer Methods for the Practising Chemical Engineer*, 1967 **Chemical Engineering Computation with MATLAB®** Yeong Koo Yeo, 2020-12-15 Chemical Engineering Computation with MATLAB Second Edition continues to present basic to advanced levels of problem solving techniques using MATLAB as the computation environment. The Second Edition provides even more examples and problems extracted from core chemical engineering subject areas and all code is updated to MATLAB version 2020. It also includes a new chapter on computational intelligence and offers exercises and extensive problem solving instruction and solutions for various problems. Features solutions developed using fundamental principles to construct mathematical models and an equation oriented approach to generate numerical results. Delivers a wealth of examples to demonstrate the implementation of various problem solving approaches and methodologies for problem formulation, problem solving, analysis and presentation as well as visualization and documentation of results. Includes an appendix offering an introduction to MATLAB for readers unfamiliar with the program which will allow them to write their own MATLAB programs and follow the examples in the book. Provides aid with advanced problems that are often encountered in graduate research and industrial operations such as nonlinear regression, parameter estimation in differential systems, two point boundary value problems and partial differential equations and optimization. This essential textbook readies engineering students, researchers and professionals to be proficient in the use of MATLAB to solve sophisticated real world problems within the interdisciplinary field of chemical engineering. The text features a solutions manual, lecture slides and MATLAB program files. **On-line Computer Methods Relevant to Chemical Engineering** British Computer Society, Institution of Chemical Engineers, Institution of Chemical Engineers (Great Britain). Nottingham Group, 1971 *Computational Techniques for Chemical Engineers* C. Storey, H. H. Rosenbrock, 2013-10-22 Computational Techniques for Chemical Engineers offers a practical guide to the chemical engineer faced with a problem of computing. The computer is a servant not a master; its value depends on the instructions it is given. This book aims to help the chemical engineer in the right choice of these instructions. The text begins by outlining the principles of operation of digital and analogue computers and then discussing the difficulties which arise in formulating a problem for solution on such a machine. This is followed by separate chapters on digital computers and their programming.

the use of digital computers in chemical engineering design work optimization techniques and their application in the selection of optimum designs the solution of sets of non linear algebraic equations via hill climbing and determination of equilibrium compositions by minimization of Gibbs free energy Subsequent chapters discuss the solution of partial or simultaneous differential equations parameter estimation in differential equations continuous systems and analogue computers
