Communicating Process Architectures 2017 & 2018 J. Bækgaard Pedersen, K. Chalmers, J.F. Broenink, 2019-03-26 Concurrent and parallel systems are intrinsic to the technology which underpins almost every aspect of our lives today This book presents the combined post proceedings for two important conferences on concurrent and parallel systems Communicating Process Architectures 2017 held in Sliema Malta in August 2017 and Communicating Process Architectures 2018 held in Dresden Germany in August 2018 CPA 2017 Fifteen papers were accepted for presentation and publication they cover topics including mathematical theory programming languages design and support tools verification and multicore

infrastructure and applications ranging from supercomputing to embedded A workshop on domain specific concurrency skeletons and the abstracts of eight fringe presentations reporting on new ideas work in progress or interesting thoughts associated with concurrency are also included in these proceedings CPA 2018 Eighteen papers were accepted for presentation and publication they cover topics including mathematical theory design and programming language and support tools verification multicore run time infrastructure and applications at all levels from supercomputing to embedded A workshop on translating CSP based languages to common programming languages and the abstracts of four fringe presentations on work in progress new ideas as well as demonstrations and concerns that certain common practices in concurrency are harmful are also included in these proceedings The book will be of interest to all those whose work involves concurrent and parallel systems

Building a Columnar Database on RAMCloud Christian Tinnefeld, 2015-07-07 This book examines the field of parallel database management systems and illustrates the great variety of solutions based on a shared storage or a shared nothing architecture Constantly dropping memory prices and the desire to operate with low latency responses on large sets of data paved the way for main memory based parallel database management systems However this area is currently dominated by the shared nothing approach in order to preserve the in memory performance advantage by processing data locally on each server The main argument this book makes is that such an unilateral development will cease due to the combination of the following three trends a Today s network technology features remote direct memory access RDMA and narrows the performance gap between accessing main memory on a server and of a remote server to and even below a single order of magnitude b Modern storage systems scale gracefully are elastic and provide high availability c A modern storage system such as Stanford s RAM Cloud even keeps all data resident in the main memory Exploiting these characteristics in the context of a main memory based parallel database management system is desirable The book demonstrates that the advent of RDMA enabled network technology makes the creation of a parallel main memory DBMS based on a shared storage approach feasible

Digital Design and Computer Organization Hassan A.
