How to Live a Low-Carbon Life Chris Goodall,2010-08-12 Drastic reduction of carbon emissions is vital if we are to avoid a catastrophe that devastates large parts of the world Governments and businesses have been slow to act individuals need to take the lead now if we are to avoid climate chaos Each Westener is responsible for an average 10 20 tonnes of carbon emissions each year depending on where you live In *How to Live a Low Carbon Life* Chris Goodall shows how easy it is to take responsibility providing a comprehensive one stop reference guide to calculating your CO2 emissions and reducing them to a more sustainable 2 tonnes a year This fully revised and expanded new edition takes into account new government targets on emissions reductions and includes up to date calculations and extensive graphics clearly laying out the path to a low carbon life *Motor Industry Magazine* ,2006 **Green Australia** Steve Lancaster,2012 *Green Australia* A snapshot examines the ways in which Australians are attempting to reduce their ecological footprint both at home and at work In 2009 the CO2 Energy Emissions Index found that Australia had overtaken the USA to become the largest per capita emitter of greenhouse gases in the world a legacy of dependence on coal fired power stations the widespread adoption of conventional farming techniques heavy reliance on vehicles powered by fossil fuel dirty industrial practices and a growing mountain of waste Yet in recent years there has been a growing awareness that climate change is beginning to bite the recent drought and devastating floods suggesting that more extreme weather patterns are likely unless significant steps are taken to combat global warming Using case studies and up to date research this book demonstrates that although much more needs to be

done if Australia is to secure a carbon neutral future some Green shoots are beginning to emerge
