Computer Networks ISE Larry L. Peterson,Bruce S. Davie,2007-03-01 Computer Networks ISE Fourth Edition is the only introductory computer networking book written by authors who have had first hand experience with many of the protocols discussed in the book who have actually designed some of them as well and who are still actively designing the computer networks today This newly revised edition continues to provide an enduring practical understanding of networks and their building blocks through rich example based instruction The authors focus is on the why of network design not just the specifications comprising today s systems but how key technologies and protocols actually work in the real world to solve specific problems The new edition makes less use of computer code to explain protocols than earlier editions Moreover this new edition shifts the focus somewhat higher in the protocol stack where there is generally more innovative and exciting work going on at the application and session layers than at the link and physical layers Completely updated with NEW sidebars discussing successes failures of previously deployed networks Thorough companion website with downloadable OpNet network

Randolph Nelson, 2013-06-29 We will occasionally footnote a portion of text with a to indicate Notes on the that this portion can be initially bypassed The reasons for bypassing a Text portion of the text include the subject is a special topic that will not be referenced later the material can be skipped on first reading or the level of mathematics is higher than the rest of the text In cases where a topic is self contained we opt to collect the material into an appendix that can be read by students at their leisure The material in the text cannot be fully assimilated until one makes it Notes on their own by applying the material to specific problems Self discovery Problems is the best teacher and although they are no substitute for an inquiring mind problems that explore the subject from different viewpoints can often help the student to think about the material in a uniquely personal way With this in mind we have made problems an integral part of this work and have attempted to make them interesting as well as informative Technical, Commercial and Regulatory Challenges of QoS XiPeng Xiao, 2008-10-27

Parallel Programming Thomas Rauber, Gudula Rünger, 2023-04-04 This textbook covers the new development in processor architecture and parallel hardware. It provides detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers. The book is structured in three main parts covering all areas of parallel computing: the architecture of parallel systems, parallel programming models and environments, and the implementation of efficient application algorithms. The emphasis lies on parallel programming techniques needed for different architectures. In particular, this third edition includes an extended update of the chapter on computer architecture and performance analysis, taking new developments such as the aspect of energy consumption into consideration. The description of OpenMP has been extended and now also captures the task concept of OpenMP. The chapter on message passing programming has been extended and updated to include new features of MPI such as extended reduction operations and non-blocking collective communication operations. The chapter on GPU programming also has been updated. All other chapters also have been revised carefully. The main goal of this book is to present parallel programming techniques that can be used in many situations for many application areas and to enable the reader to develop correct and efficient parallel programs. Many example programs and exercises are provided to support this goal and to show how the techniques can be applied to further applications. The book can be used as a textbook for students as well as a reference book for professionals. The material of the book has been used for courses in parallel programming at different universities for many years.
