Chapter 28. Reflection and Refraction More Refraction—continued

5. The two transparent blocks (right) are made of different materials. The speed of light in the left block is greater than the speed of light in the right block. Draw an appropriate light path through and beyond the right block. Is the light that emerges displaced more or less than light emerging from the left block?

6. Light from the air passes through plates of glass and plastic below. The speeds of light in the different materials are shown to the right (these different speeds are often implied by the "index of refraction" of the material). Construct a rough sketch showing an appropriate path through the system of four plates.

Compared to the 50° incident ray at the top, what can you say about the angles of the ray in the air between and below the block pairs?

$$v = c$$

$$v = 0.6c$$

$$v = 0.7c$$

$$v = 0$$

$$v = 0.7c$$

$$v = 0.6c$$

$$v = c$$

7. Parallel rays of light are refracted as they change speed in passing from air into the eye (left below). Construct a rough sketch showing appropriate light paths when parallel light under water meets the same eye (right below).

If a fish out of water wishes to clearly view objects in air, should it wear goggles filled with water or with air?

8. Why do we need to wear a face mask or goggles to see clearly when under water?

Just Breathe!
