Chapter 1

- Scientific Methods
 - Fact- generally a close agreement by competent observers who make a series of observations about the same phenomenon
 - Hypothesis- an educated guess that is only presumed to be factual until supported by experiment
 - To distinguish whether a hypothesis is scientific or not, check to see if there is a test for proving it wrong; if there is no test, then it is not scientific
 - Law- when a hypothesis has been tested over and over again and has not been contradicted
 - Theory- a synthesis of a large body of information that encompasses well-tested and verified hypotheses about certain aspects of the natural world
 - Evolve as they go through stages of redefinition and refinement

Chapter 2- Newton's First Law of Motion- Inertia

- Aristotle on Motion
 - Aristotle divided motion into two main classes: natural motion and violent motion
 - Natural motion
 - Proceeds from the "nature" of an object, dependent on the combination of the four elements (earth, water, air, and fire)
 - Every object in the universe has a proper place, determined by its "nature"; any object not in its proper place will "strive" to get there
 - Violent motion
 - Results from pushing or pulling forces; imposed motion
 - Taught that all motions are due to the nature of the moving object or due to a sustained push or pull
- Galileo's Experiments
 - Leaning Tower
 - Galileo easily demolished Aristotle's falling body hypothesis
 - Dropped objects of various weights from the top of the Leaning Tower of Pisa to compare their falls
 - Found that a stone twice as heavy as another did not fall twice as fast
 - Except for the small effect of air resistance, objects of various weights,

Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging
efforts of a growing international network of researchers and practitioners to promote the development and uptake of
evidence based pedagogies in higher education at something a level approaching large scale impact By offering a
communication venue that attracts and enhances much needed partnerships among practitioners and researchers in
pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the
implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we
highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical
designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in
the education research community These types of studies constitute the practice pull that we see as a necessary
counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner
partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings
and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships
between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result
these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions
we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical
designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers
alike We hope by bringing these types of studies together in an open access format that we may contribute to the
development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
