The Morphosyntax of Gender
Ruth T. Kramer, 2015 This book presents a new cross linguistic analysis of gender and its effects on morphosyntax It addresses questions including the syntactic location of gender features the role of natural gender and the relationship between syntactic gender features and the morphological realization of gender Ruth Kramer argues that gender features are syntactically located on the n head little n which serves to nominalize category neutral roots Those gender features are either interpretable as in the case of natural gender or uninterpretable like the gender of an inanimate noun in Spanish Adopting Distributed Morphology the book lays out how the gender features on n map onto the gender features relevant for morphological exponence The analysis is supported by an in depth case study of Amharic which poses challenges for previous gender analyses and provides clear support for gender on n The proposals generate a typology of two and three gender systems with the various types illustrated using data from a genetically diverse set of languages Finally further evidence for gender being on n is provided from case studies of Somali and Romanian as well as from the relationship between gender and other linguistic phenomena including derived nouns and declension class Overall the book provides one of the first large scale cross linguistically oriented theoretical approaches to the morphosyntax of gender
