Essentials of Inorganic Chemistry Katja A. Strohfeldt,2015-01-30 A comprehensive introduction to inorganic chemistry and specifically the science of metal based drugs *Essentials of Inorganic Chemistry* describes the basics of inorganic chemistry including organometallic chemistry and radiochemistry from a pharmaceutical perspective Written for students of pharmacy and pharmacology pharmaceutical sciences medicinal chemistry and other health care related subjects this accessible text introduces chemical principles with relevant pharmaceutical examples rather than as stand alone concepts allowing students to see the relevance of this subject for their future professions It includes exercises and case studies

Advanced Practical Inorganic and Metalorganic Chemistry R. John Errington,2024-11-15 While the boundaries between the areas of chemistry traditionally labeled as inorganic organic and physical are gradually diffusing the practical techniques adopted by workers in each of these areas are often radically different The breadth and variety of research classed as inorganic chemistry is readily apparent from an inspection of some of the leading international journals and can be quite daunting for newcomers to this domain who are likely to have only limited experience of the methodologies involved This book has therefore been written to provide guidance for those unfamiliar with the techniques most often encountered in synthetic inorganic metalorganic chemistry with an emphasis on procedures for handling air sensitive compounds One chapter is devoted to more specialized techniques such as metal vapor synthesis and a review of preparative methods for a selection of starting materials is included as an aid to those planning research projects While this book is aimed primarily at postgraduate and advanced undergraduate students involved in inorganic research projects synthetic organic chemists and industrial chemists will also find much useful information within its pages Similarly it serves as a useful reference source for materials and polymer scientists who wish to take advantage of recent progress in precursor synthesis and catalyst development
