Concreteness And Specificity In Clinical Psychology Evaluations And Interventions:

Concreteness and Specificity in Clinical Psychology Luciano L'Abate, 2015-04-10 This provocative volume updates L'Abate's signature ideas focusing in particular on the concepts of concreteness and specificity as basic tenets of evaluation and therapy. Noting society's growing familiarity with technology, current concerns about treatment accessibility and widespread interest in wellness promotion, he argues for remote writing exercises targeted to specific client issues and monitored by the clinician instead of relying on traditional talk-based therapy. This attention to concreteness and specificity in baseline evaluation, post-treatment evaluation, and follow-up, the author asserts, is central to making treatment replicable, less subject to impasses or missteps, and more professional with the potential of changing how therapy is conducted, as well as how clinicians are trained and practice. The book's framework includes rationales, models, empirical data, and examples of prescriptive remote writing exercises. Featured in the coverage: Online interventions; here to stay and to grow; Verifiability in clinical psychology practices; Present status and future perspectives for personality and family assessment; Practice without theory; combining theory with practice; Toward a unifying framework of human relationships; PIPES: Programmed Interactive Practice Exercise and Prescriptions. *Concreteness and Specificity in Clinical Psychology* will bring a new level of discussion and debate among clinical psychology practitioners and practicing psychotherapists in private practice and the public sector.

Enabling Health Informatics Applications J. Mantas, A. Hasman, M.S. Househ, 2015-07-24 Informatics and technology have long been indispensable to the provision of healthcare, and their importance continues to grow in this field. This book presents the 65 full papers presented at the 13th annual International Conference on Informatics Management and Technology in Healthcare (ICIMTH 2015) held in Athens, Greece, in July 2015. The conference attracts scientists and practitioners from all continents and treats the field of biomedical informatics in a very broad framework, examining the research and applications, outcomes of informatics from cell to population, and covering a number of technologies such as imaging sensors and biomedical equipment, as well as management and organizational subjects such as legal and social issues. The conference also aims to set research priorities in health informatics. This overview of current research and development will be of interest to all those whose work involves the use of biomedical informatics in the planning, provision, and management of healthcare.

Clinical Psychology and Psychotherapy as a Science Luciano L'Abate, 2012-08-28 This book demonstrates how clinical psychology and psychotherapy practices may reach a scientific level provided they change the three basic paradigms that have controlled those practices in the last century. These three now outdated paradigms are: 1. one-on-one personal contacts; 2. through talk; 3. These paradigms have served well in the past but they are no less helpful in the current digitally focused world.

Holden Patterson, 1975 **Toward Effective Counseling and Psychotherapy** Robert Carkhuff, 2017-09-29 The field of counseling and psychotherapy has for years presented the puzzling spectacle of unabating enthusiasm for forms of treatment whose effectiveness cannot be objectively demonstrated With few exceptions statistical studies have consistently failed to show that any form of psychotherapy is followed by significantly more improvement than would be caused by the mere passage of an equivalent period of time Despite this practitioners of various psychotherapeutic schools have remained firmly convinced that their methods are effective Many recipients of these forms of treatment also believe that they are being helped The series of investigations reported in this impressive book resolve this paradoxical state of affairs The investigators have overcome two major obstacles to progress in the past lack of agreement on measures of improvement and difficulty of measuring active ingredients of the psychotherapy relationship The inability of therapists of different theoretical persuasions to agree on criteria of improvement has made comparison of the results of different forms of treatment nearly impossible The authors have solved this intractable problem by using a wide range of improvement measures and showing that regardless of measures used in different studies a significantly higher proportion of results favor their hypothesis than disregard it Overall this book represented a major advance at the time of its original publication and is of continuing importance The research findings resolve some of the most stubborn research problems in psychotherapy and the training program based on them points the way toward overcoming the shortage of psychotherapists

The Annual of Psychoanalysis, V. 22 Jerome A. Winer, 2013-05-13 Volume 22 of The Annual of Psychoanalysis begins with the provocative reflections of Jane Flax and Robert Michels on the current status and future prospects of psychoanalysis a century after Freud Flax believes that analysis will not survive in the postmodern West if analysts cling to the medical model and the notion of analysis as a clinical science Michels believes analysis will be revived in the next century by reorganizing its training institutes within universities A section on Psychoanalysis and the Visual Arts includes John Gedo's probing examination of the inner world of Paul Gauguin and William Meissner's reflections on Vincent van Gogh as artist Johann Michael Rotmann's examination of the transference meanings of third party payment within Germany's health insurance system is a timely consideration of issues that are increasingly salient for American analysts and therapists A rich harvest of theoretical and clinical papers rounds out this volume of The Annual In A Time of Questioning Leon Wurmser responds to the inner and outer challenges before analysis in a closely reasoned defense of the applicability of classical analytic technique to severely disturbed patients Michael Hoit examines the noninterpretive interactive aspects of the analytic relationship arguing that the analyst's noninterpretive activities are intrinsic to treatment and must be incorporated into the theory of therapeutic action In Fables as Psychoanalytic Metaphors Elaine Caruth describes some psychoanalytic metaphors contained within the lessons of the Aesopian fables proposing that the fables address interpersonal and group conflicts that often involve moral issues Wilma Bucci offers her multiple code theory as a new model of emotion and mind based on current theory and research in cognitive science that can account for

clinical concepts and provide coherent framework for empirical research And Ralph Roughton uses the case history of Laura to underscore the central role of repetition and interaction in the analytic process Volume 22 will not disappoint readers of this distinguished continuing series Like its predecessors it is a thoroughly assembled collection responsive to the conceptual clinical and institutional challenges now before the field
