Conducting Astronomy Education Research An Astronomers Guide:

Conducting Astronomy Education Research Stephanie Slater, Timothy Slater, Inge Heyer, Janelle Bailey, 2015-07-16 This expanded and updated second edition is written for astronomers who want to learn more about how science education research is done and how to begin studying the teaching and learning of astronomy It provides fruitful research designs and effective data collection and analysis strategies and points readers to avenues for publishing scholarly work in astronomy education research The authors long time contributors to the astronomy education research community provide rubber meets the road guidance to both first time and experienced researchers to get projects off the ground and into the scholarly literature [Conducting Astronomy Education Research](#) Janelle M. Bailey, Timothy F. Slater, Stephanie J. Slater, 2011-01-28 Tim Slater and Roger Freedman have worked to improve astronomy and overall science education for many years Now they ve partnered to create a new textbook a re envisioning of the course focused on conceptual understanding and inquiry based learning Investigating Astronomy A Conceptual Approach to the Universe is a brief 15 chapter text that employs a variety of activities and experiences to encourage students to think like a scientist **Research on Teaching Astronomy in the Planetarium** Timothy F. Slater, Coty B. Tatge, 2017-08-10 From a noted specialist in astronomy education and outreach this Brief provides an overview of the most influential discipline based science education research literature now guiding contemporary astronomy teaching In recent years systematic studies of effective and efficient teaching strategies have provided a solid foundation for enhancing college level students learning in astronomy Teaching astronomy and planetary science at the college level was once best characterized as professor centered information download lectures Today astronomy faculty are striving to drastically improve the learning environment by using innovative teaching approaches Uniquely the authors have organized this book around strands of commonly employed astronomy teaching strategies to help readers professors and scholars quickly access the most relevant work while simultaneously avoiding the highly specialized technical vocabulary of constructivist educational pedagogies unfamiliar to most astronomy professors For readers who are currently teaching astronomy at the college level or those who plan on teaching at the college level in the future this Brief provides an indispensable guide **Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal

arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
